EXPERIMENT – 07

User, Role and Permission Management in Zoho Creator

S Vishal 240701600

Application: College Event Management System with Role-Based User Permissions using Zoho Creator.

AIM:

To create a College Event Management System in Zoho Creator and demonstrate role-based user permissions by creating distinct user roles (Admin, Event Coordinator, Faculty Coordinator, and Student) and assigning specific view, add, edit, and delete access levels.

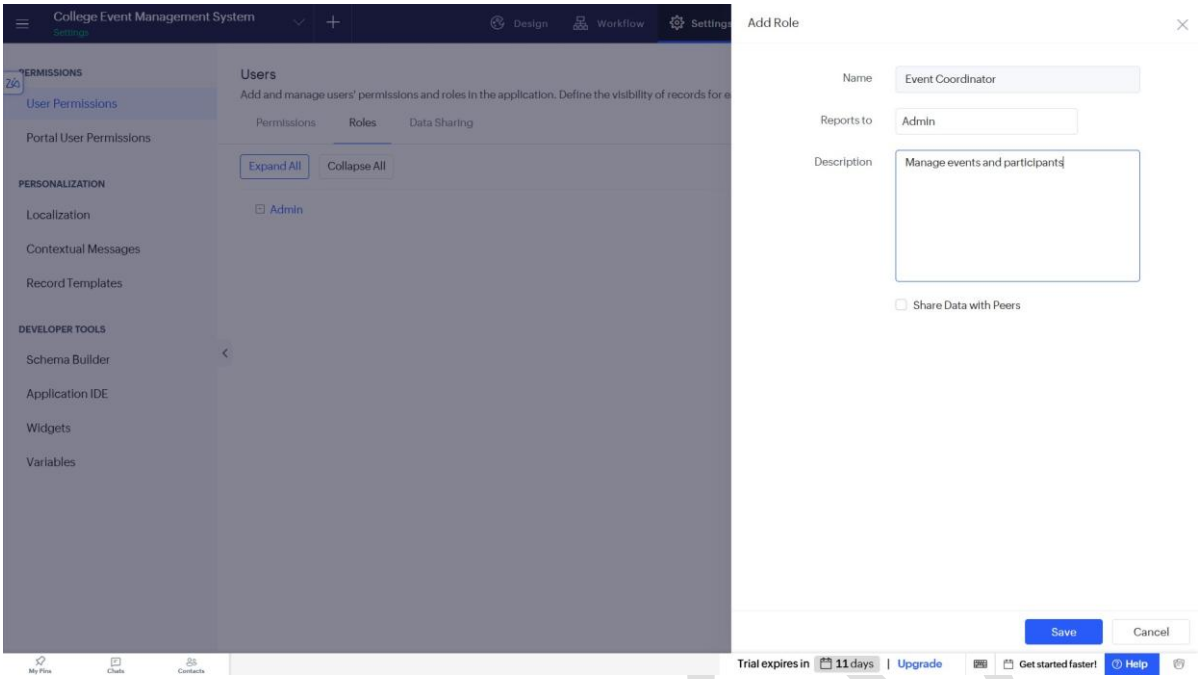

PROCEDURE:

1. Create a new application named 'College Event Management System' with 'Events' and 'Participants' forms.
2. Navigate to Settings -> Users and Permissions -> Roles to define the organizational hierarchy.
3. Create the roles: Admin (Top level), Event Coordinator (Reports to Admin), Faculty Coordinator (Reports to Admin), and Student (Reports to Admin).
4. Navigate to the Permissions tab to define custom access profiles for each role.
5. Configure the 'Admin' profile with full Access, View, Edit, and Delete permissions for Events and Participants.
6. Configure the 'Event Coordinator' profile with Access, View, and Edit permissions for Events and Participants, while restricting Delete access.
7. Configure the 'Faculty Coordinator' profile with restricted Access limited to 2 Reports for Participants, and View-only monitoring permissions.
8. Configure the 'Student' profile with View-only access to Events and Participants, sufficient to browse events and register.
9. Navigate to the Users tab, add sample users, and assign them their respective roles and permission profiles.
10. Log in as each user and access the application dashboard to verify that the Events and Participants data, along with the access controls, work as expected.

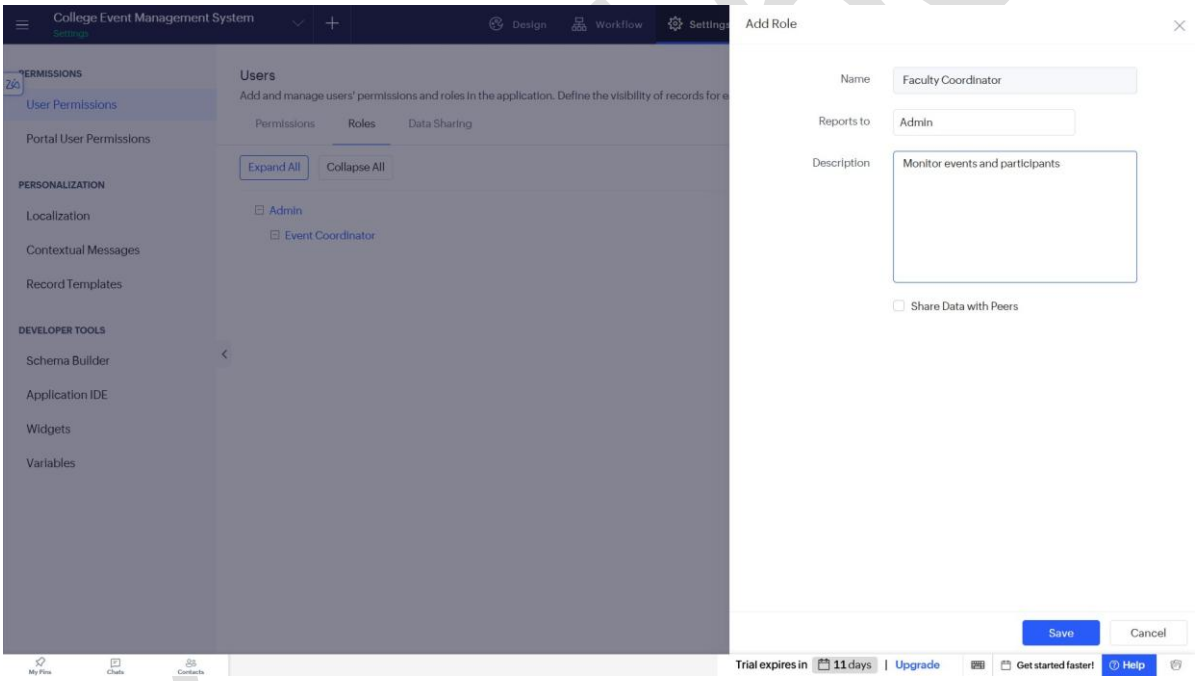

OUTPUT / SCREENSHOTS:

1. Role Hierarchy Setup (Admin, Event Coordinator, Faculty Coordinator, Student)

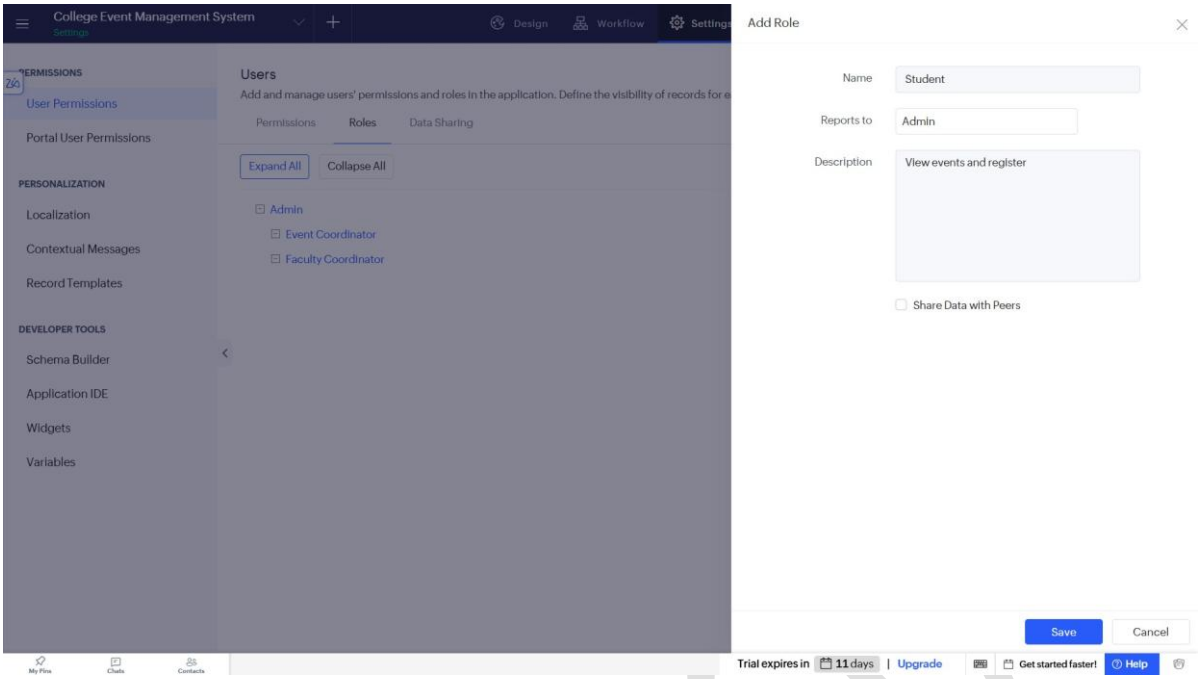

240701600

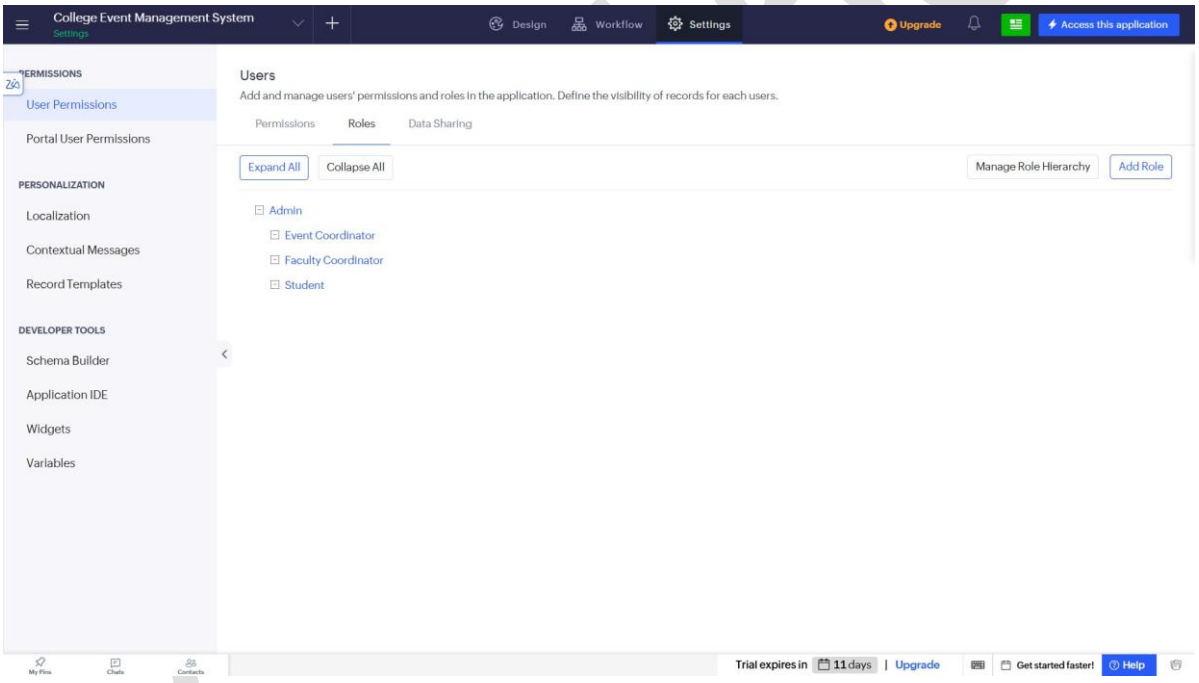

Adding the 'Event Coordinator' role, reporting to Admin.

Adding the 'Faculty Coordinator' role, reporting to Admin.

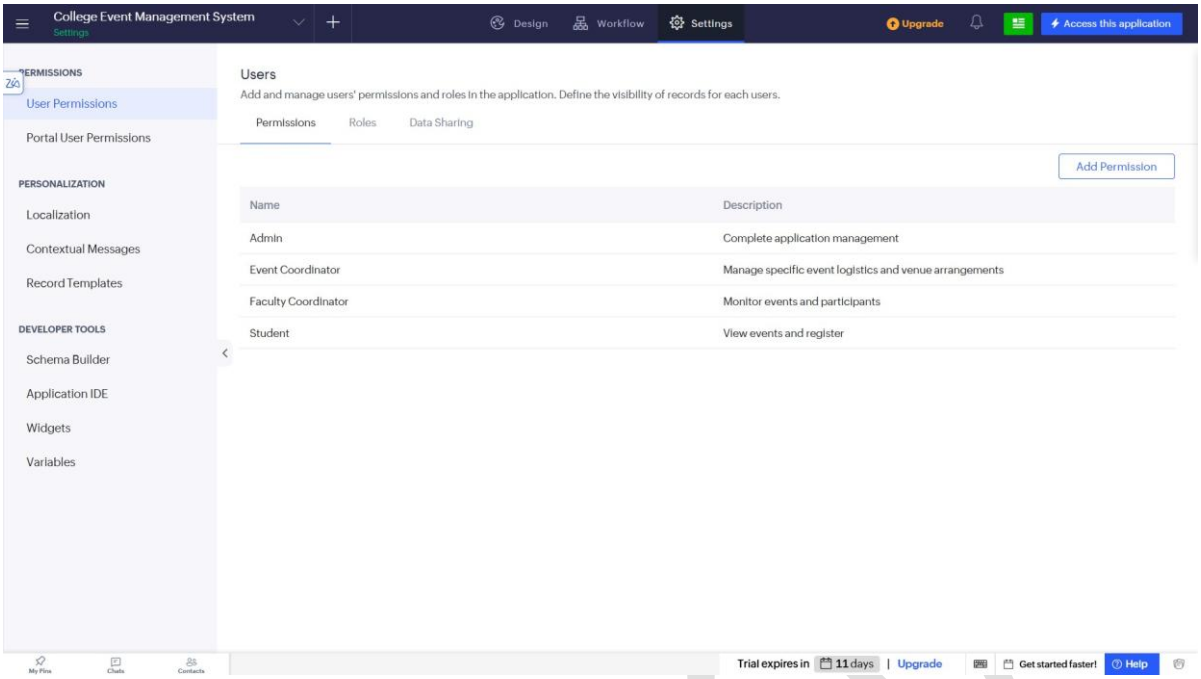

Adding the 'Student' role, reporting to Admin.

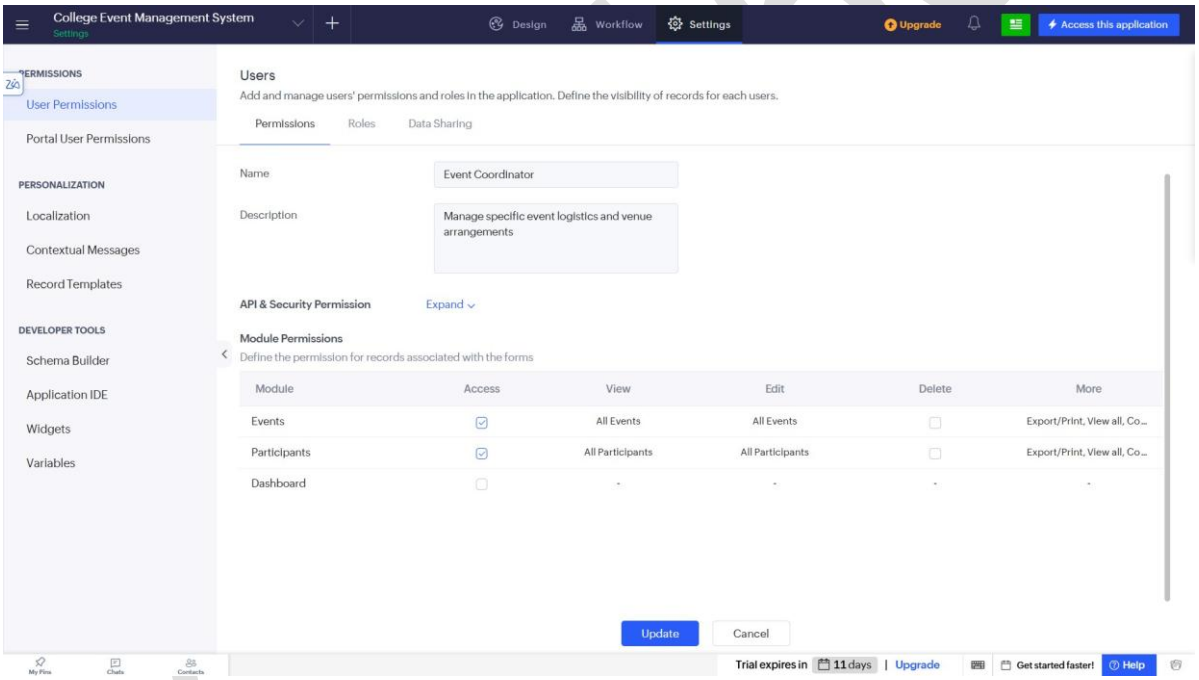

Final role hierarchy showing Admin with Event Coordinator, Faculty Coordinator, and Student roles.

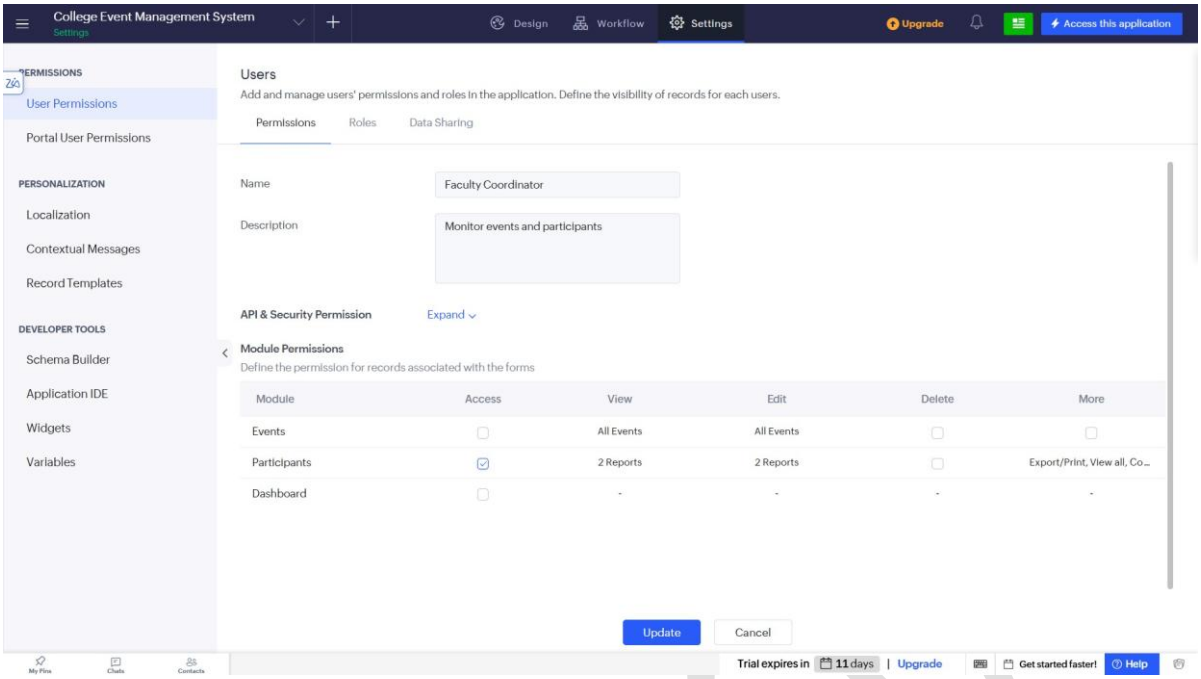

2. Permission Profiles List

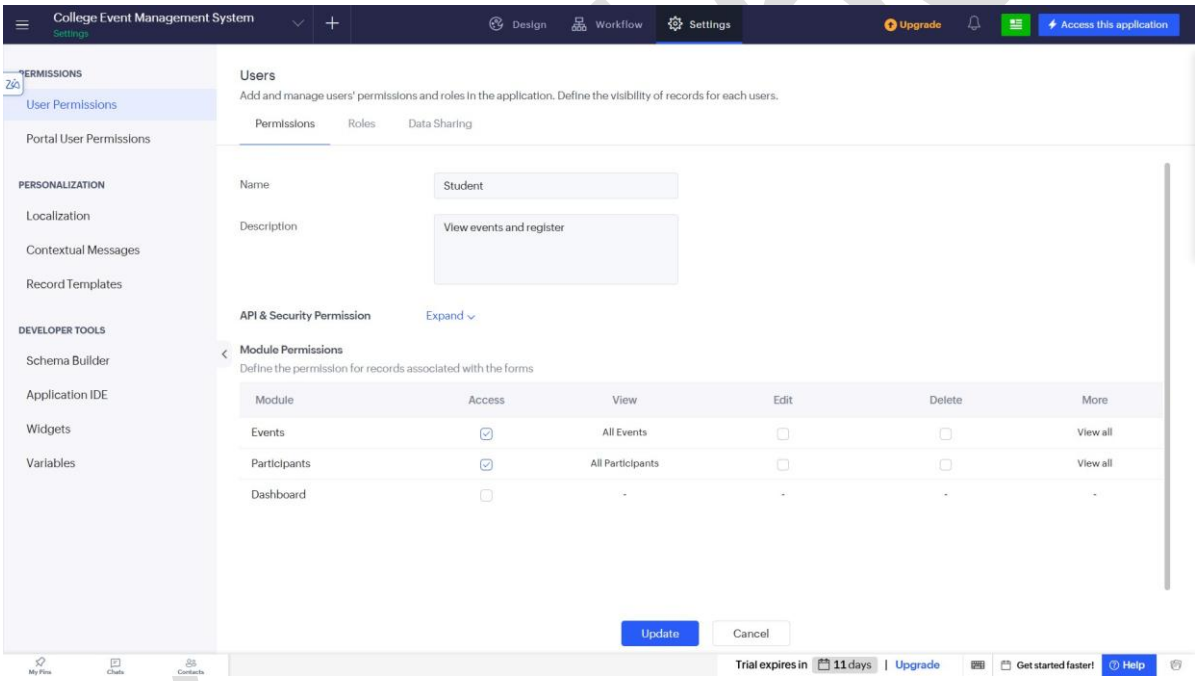

List of permission profiles: Admin, Event Coordinator, Faculty Coordinator, and Student, with their descriptions.

'Event Coordinator' permission set: full Access, View, and Edit rights for Events and Participants.

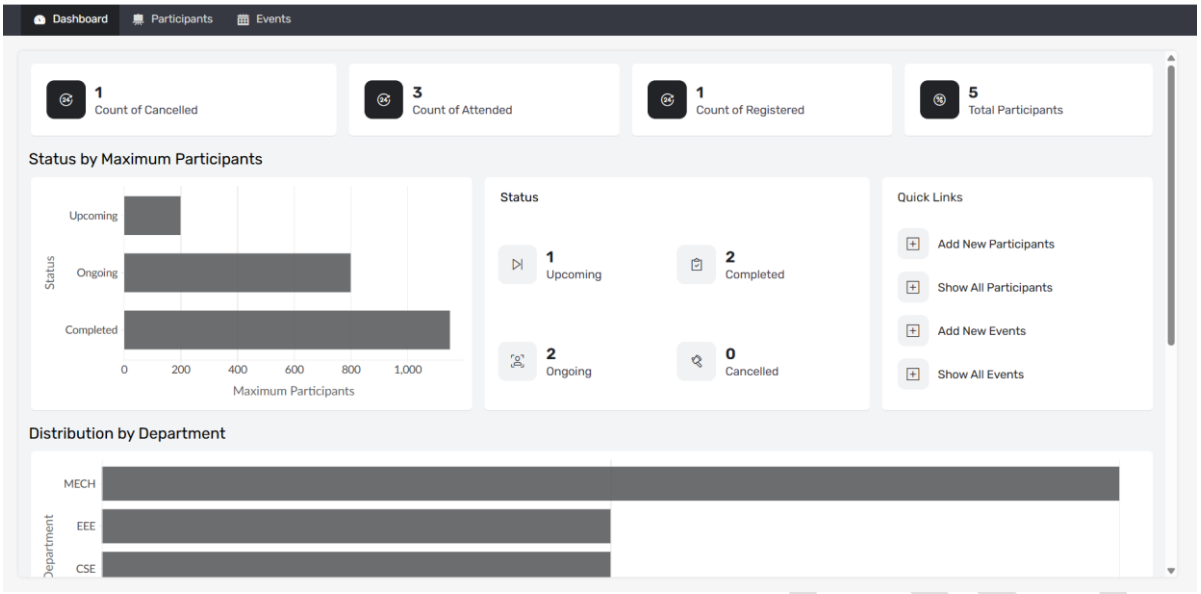

'Faculty Coordinator' permission set: restricted access limited to 2 Reports for Participants.

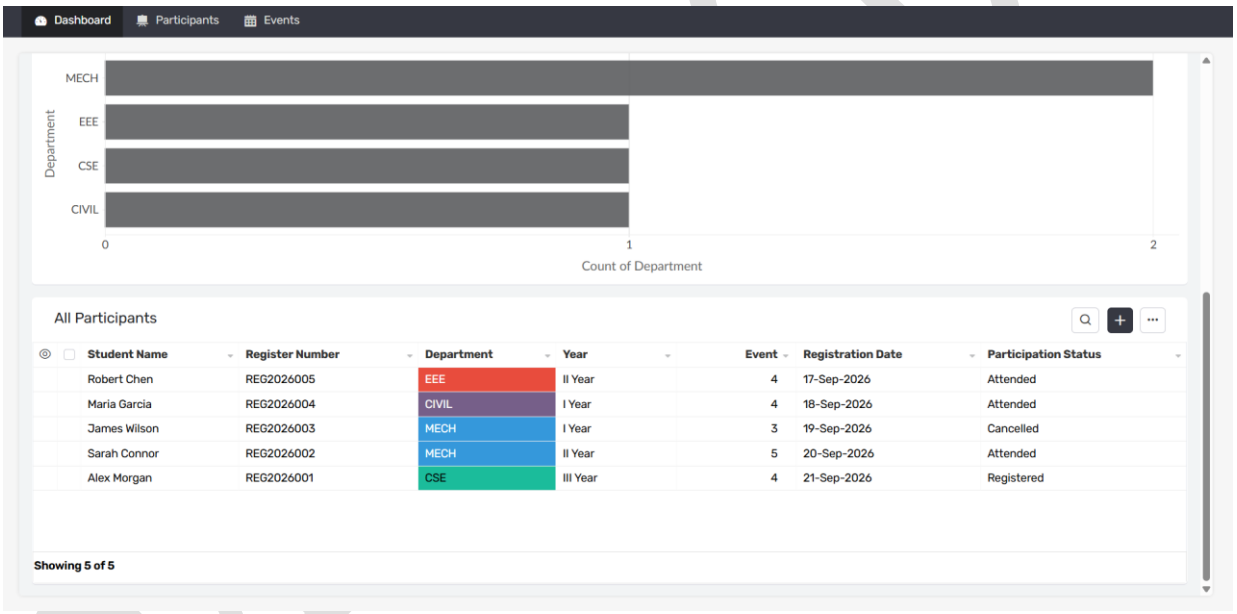

'Student' permission set: View-only access to Events and Participants.

3. Application Dashboard & Participants

Application dashboard showing event status counts, status by maximum participants, and distribution by department.

Participants table showing student details, department, registration date, and participation status.

CONCLUSION:

The College Event Management System was successfully created in Zoho Creator. The role-based access control was effectively demonstrated by assigning different module permissions to the Admin, Event Coordinator, Faculty Coordinator, and Student roles, thereby ensuring appropriate data security and workflow management.
