ROLL NO: 240701600

# ASSIGNMENT – 05

## Vehicle Service Automation Suite Workflow Options Use Case

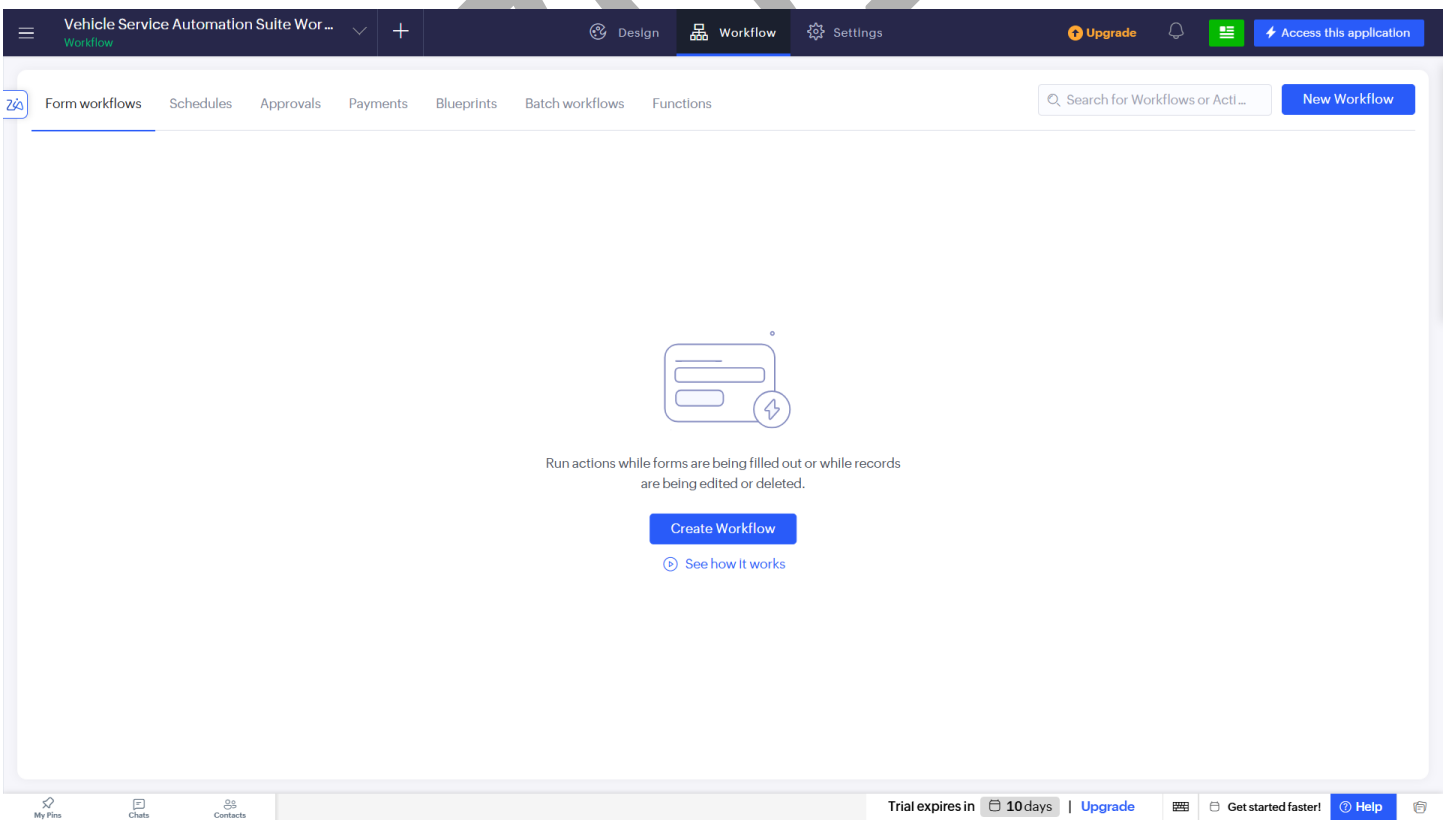

### Objective:

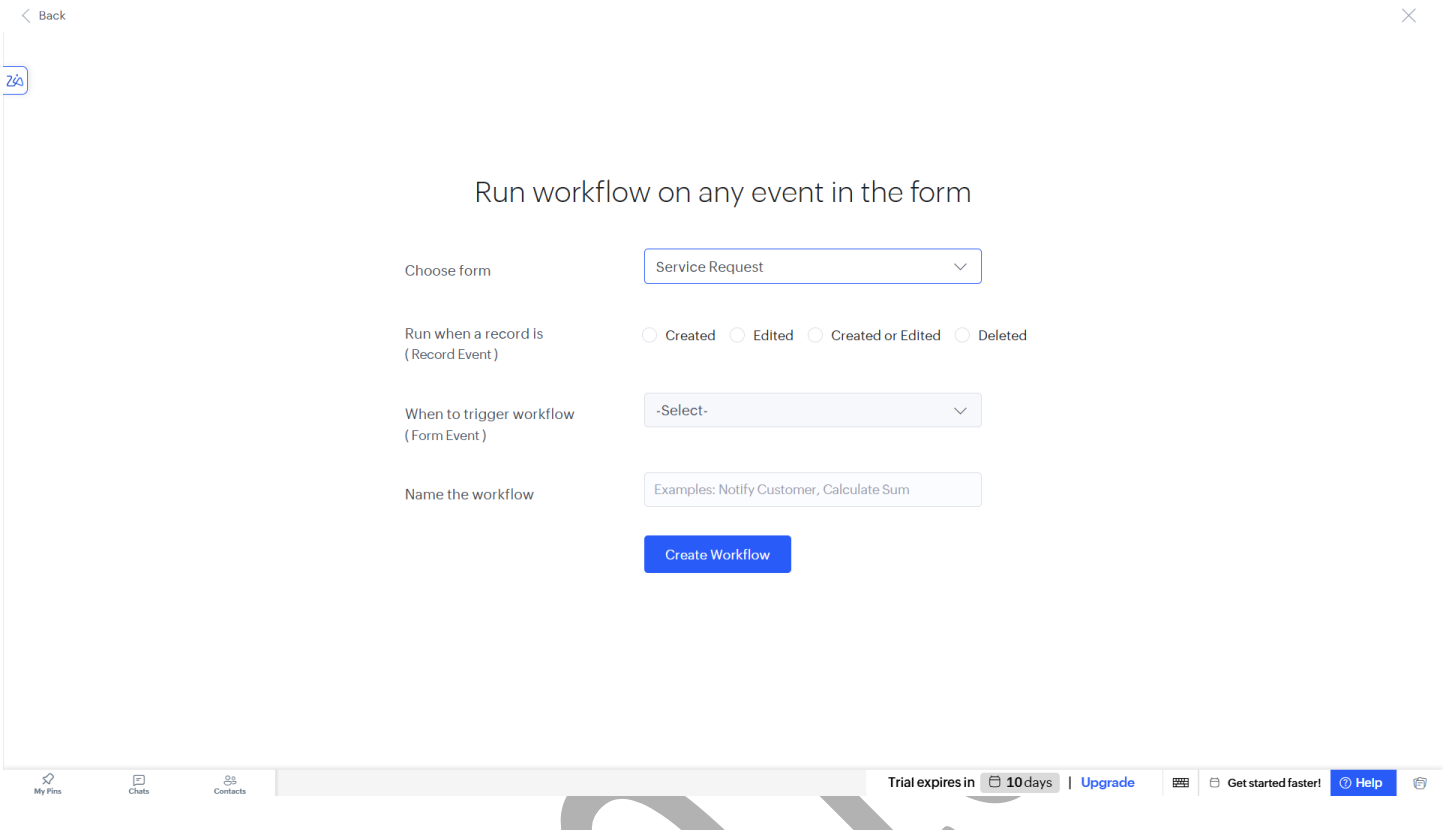

To design and build a complete automation layer in Zoho Creator for the existing "Vehicle Service Request" application, demonstrating the correct usage of all eight Workflow options available in Zoho Creator (Form Workflows, Schedules, Approvals, Payments, Blueprints, Batch Workflows, Report Workflows, and Functions) so that the service lifecycle runs with minimal manual intervention from request to vehicle delivery.

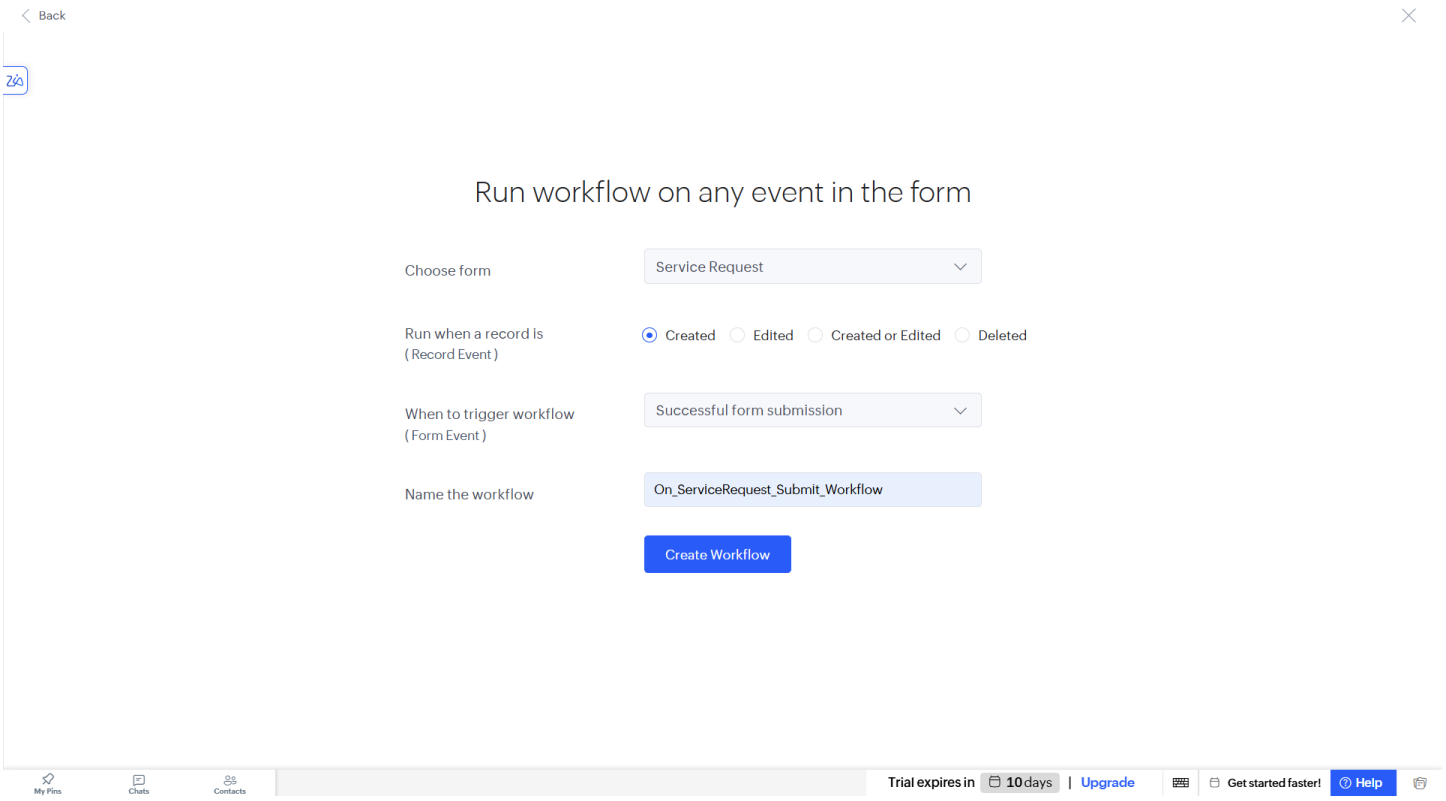

### Procedure:

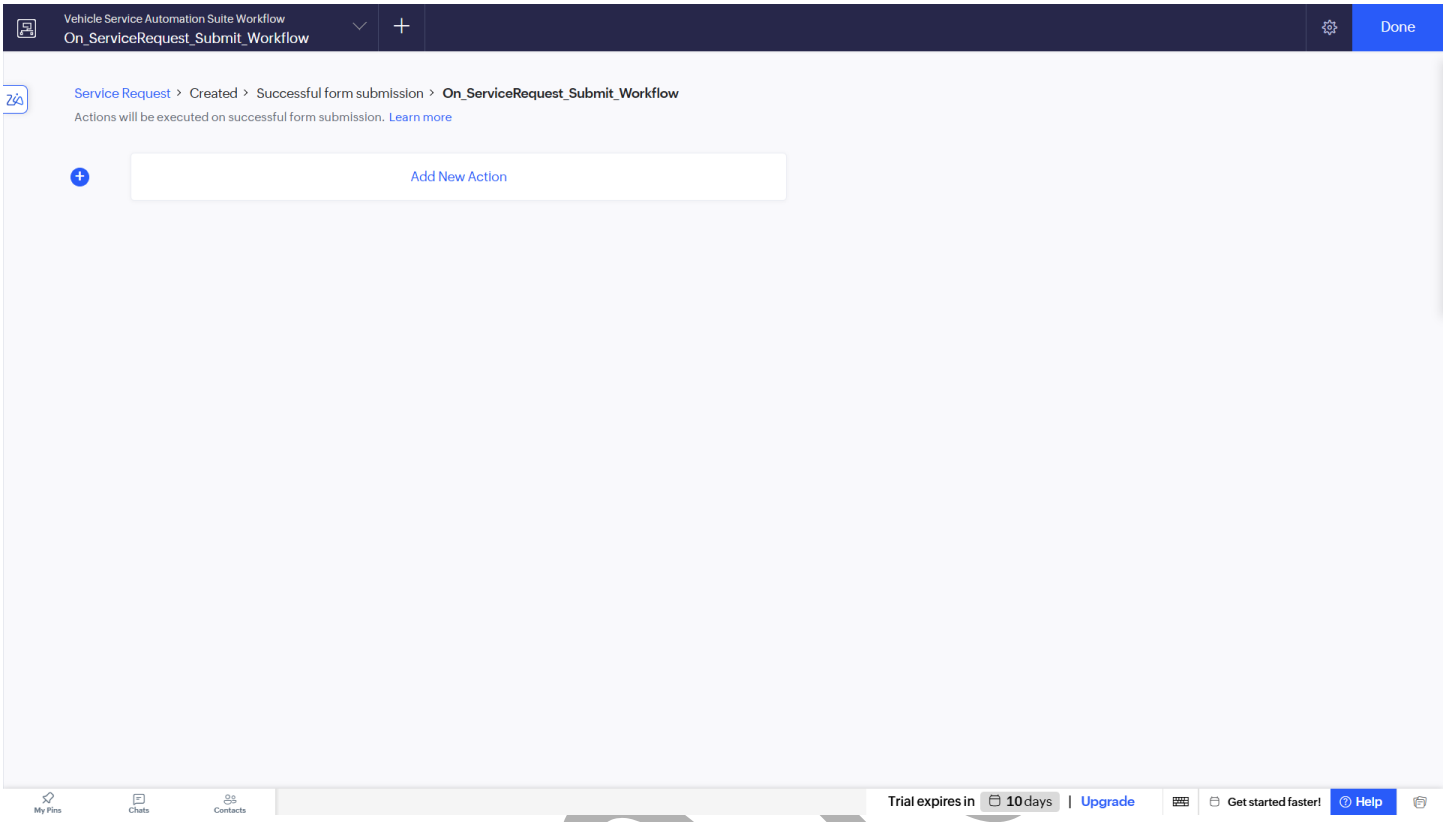

1. Form Workflows Configuration:

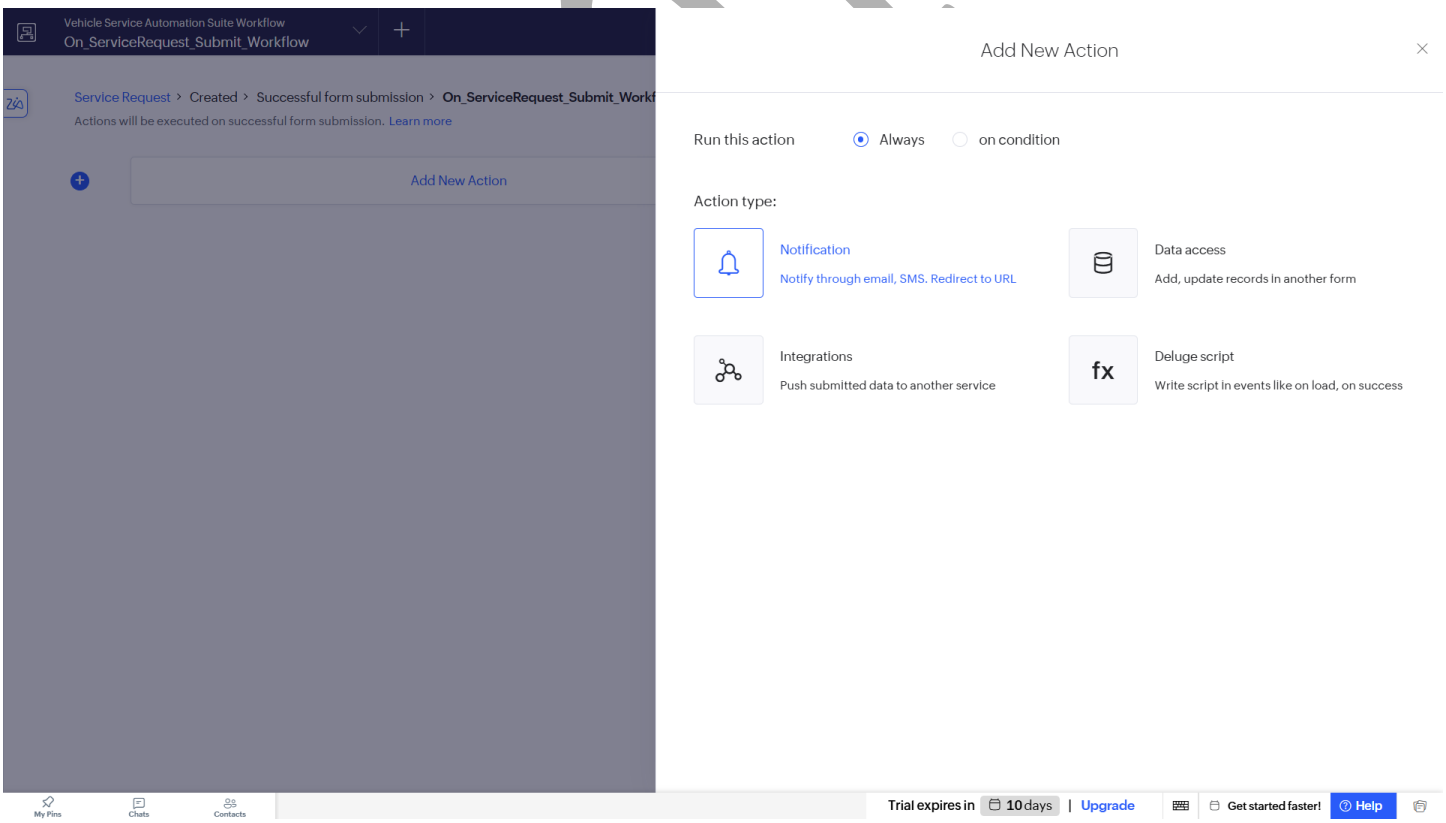

Create the "On_ServiceRequest_Submit_Workflow". Configure it to trigger instantly on successful form submission to send a confirmation email to the vehicle owner.

2. Schedules Configuration:

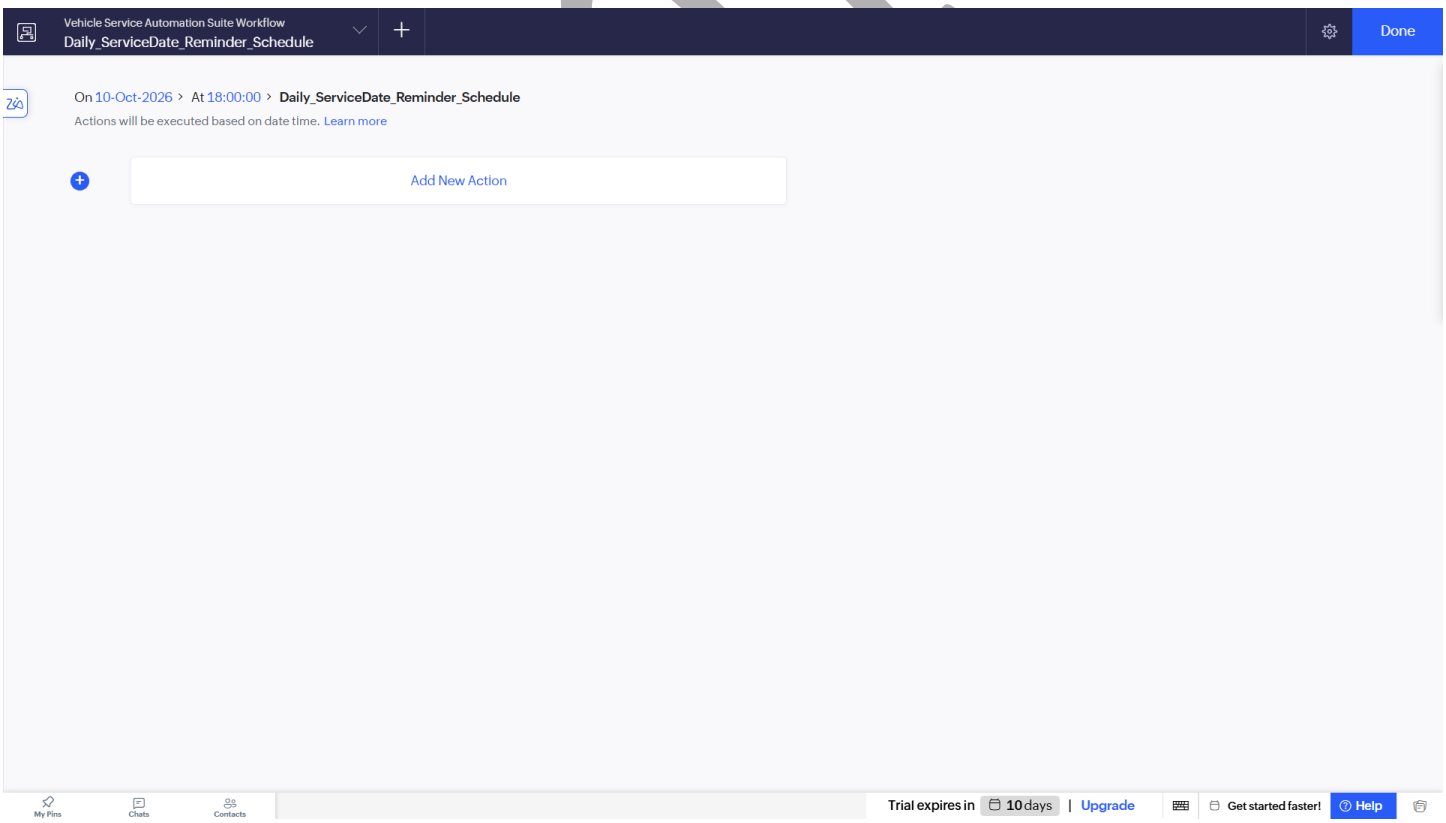

Set up the "Daily_ServiceDate_Reminder_Schedule" to run daily at 6:00 PM. This schedule will execute a Deluge script to identify records where the preferred service date is the following day and send a reminder email.

6. Batch Workflows Configuration:

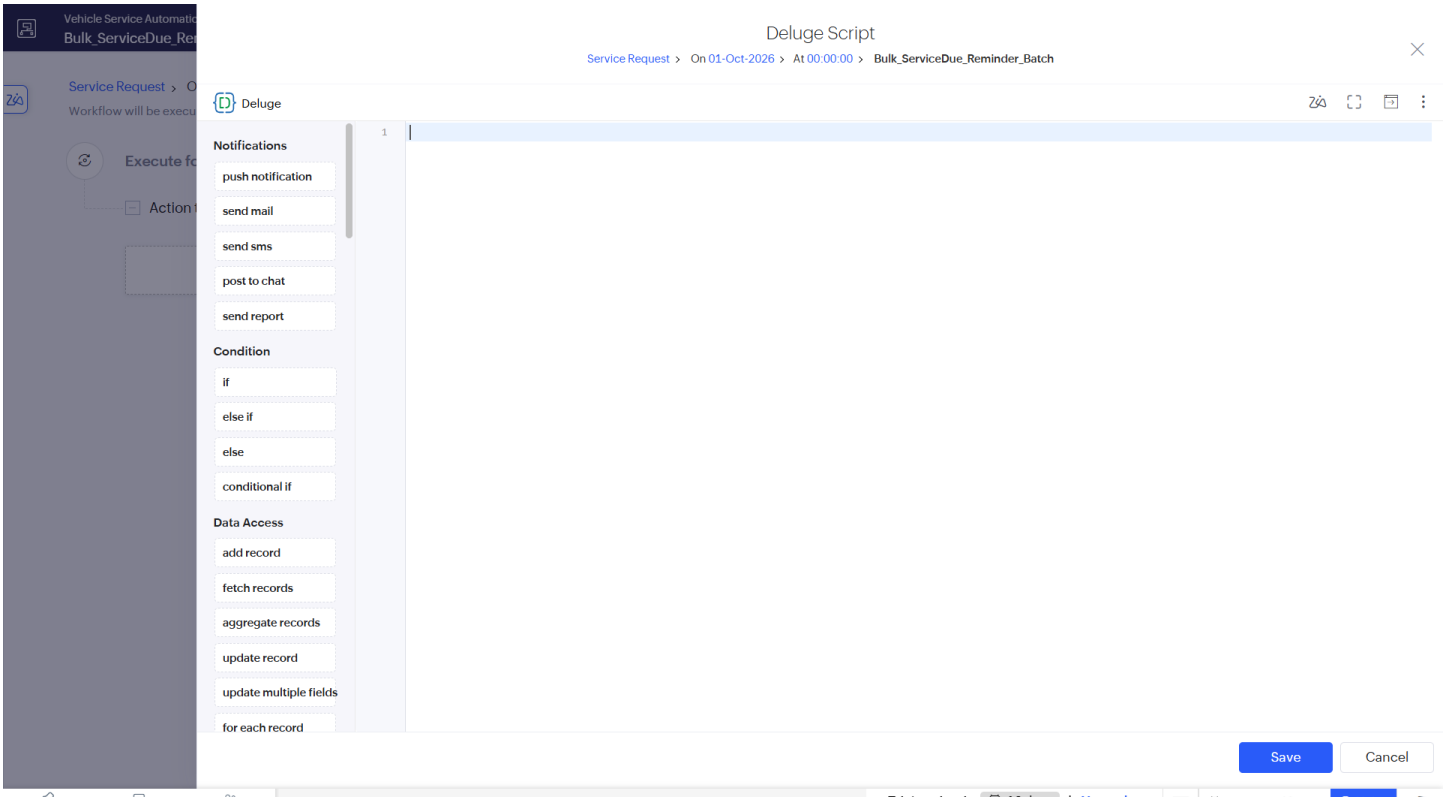

Set up the "Bulk_ServiceDue_Reminder_Batch". Schedule it to run monthly to process large volumes of records in batches, sending automated reminders to owners whose vehicles are due for service.

Help

7. Functions Configuration:

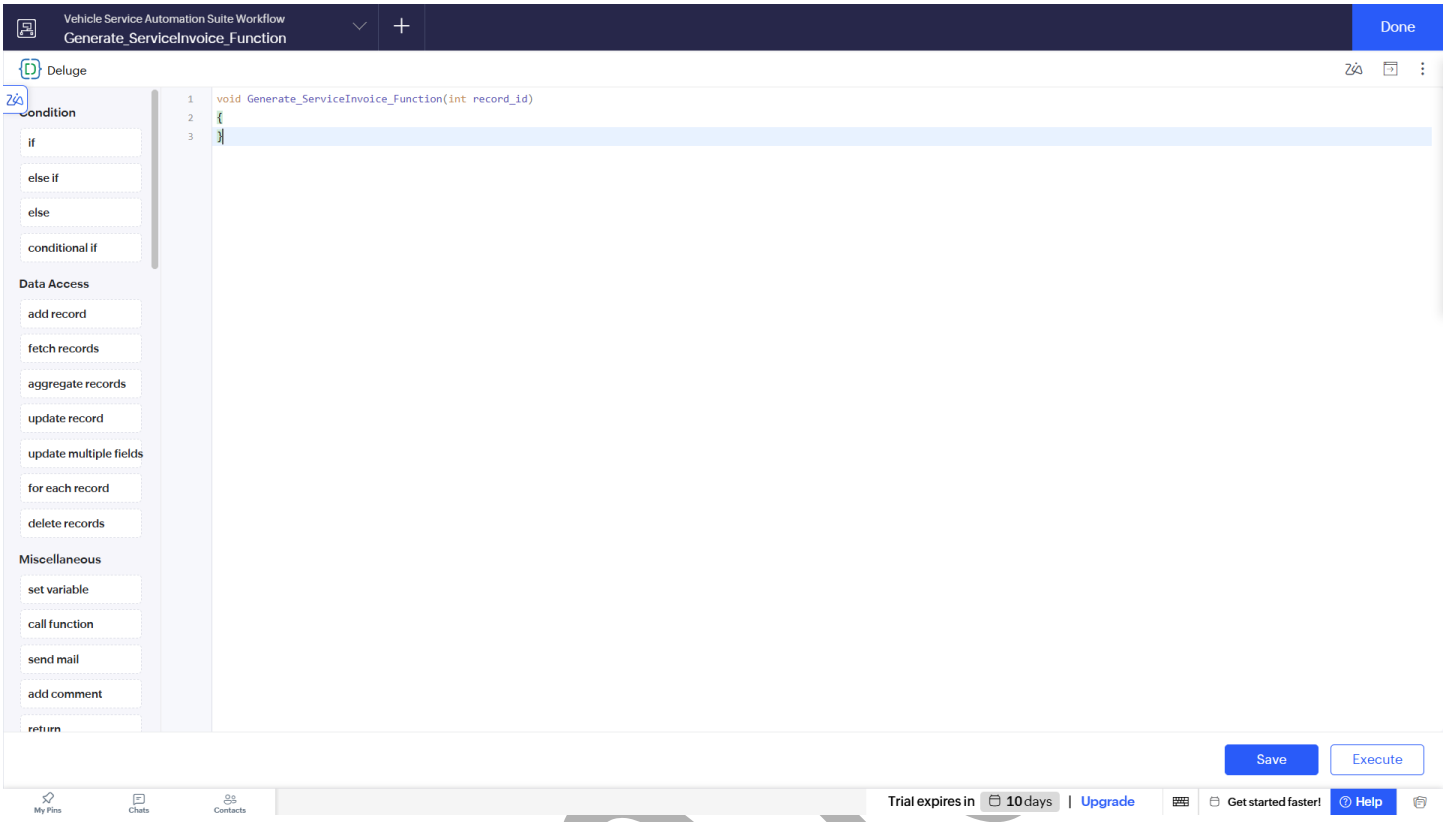

Write a reusable Deluge function named "Generate_ServiceInvoice_Function" that generates a final service invoice PDF listing parts, labor, and taxes, and emails it to the owner. Include input validation to ensure it fails safely if the record lacks an Owner Name or Net Service Cost Payable.

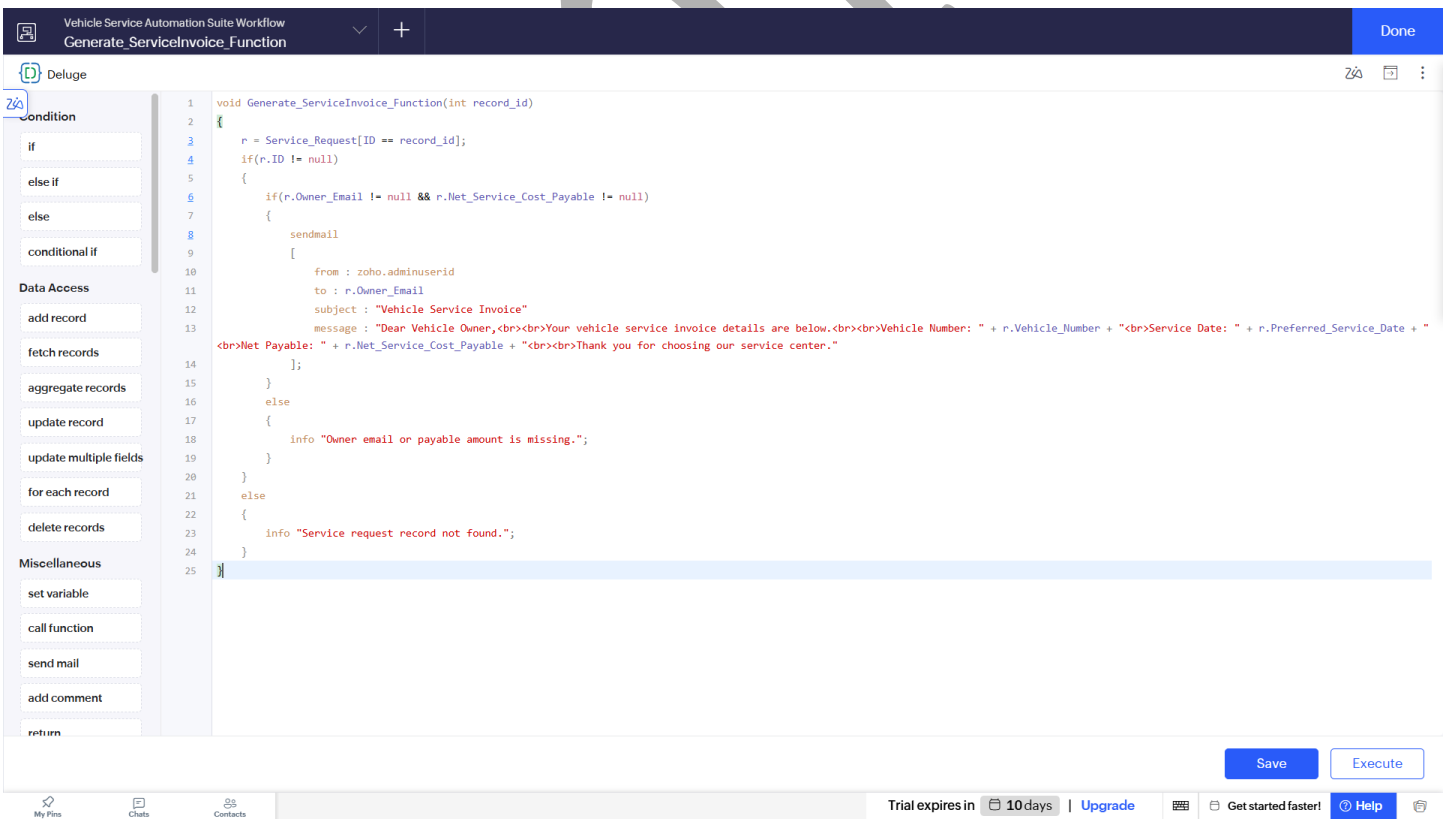

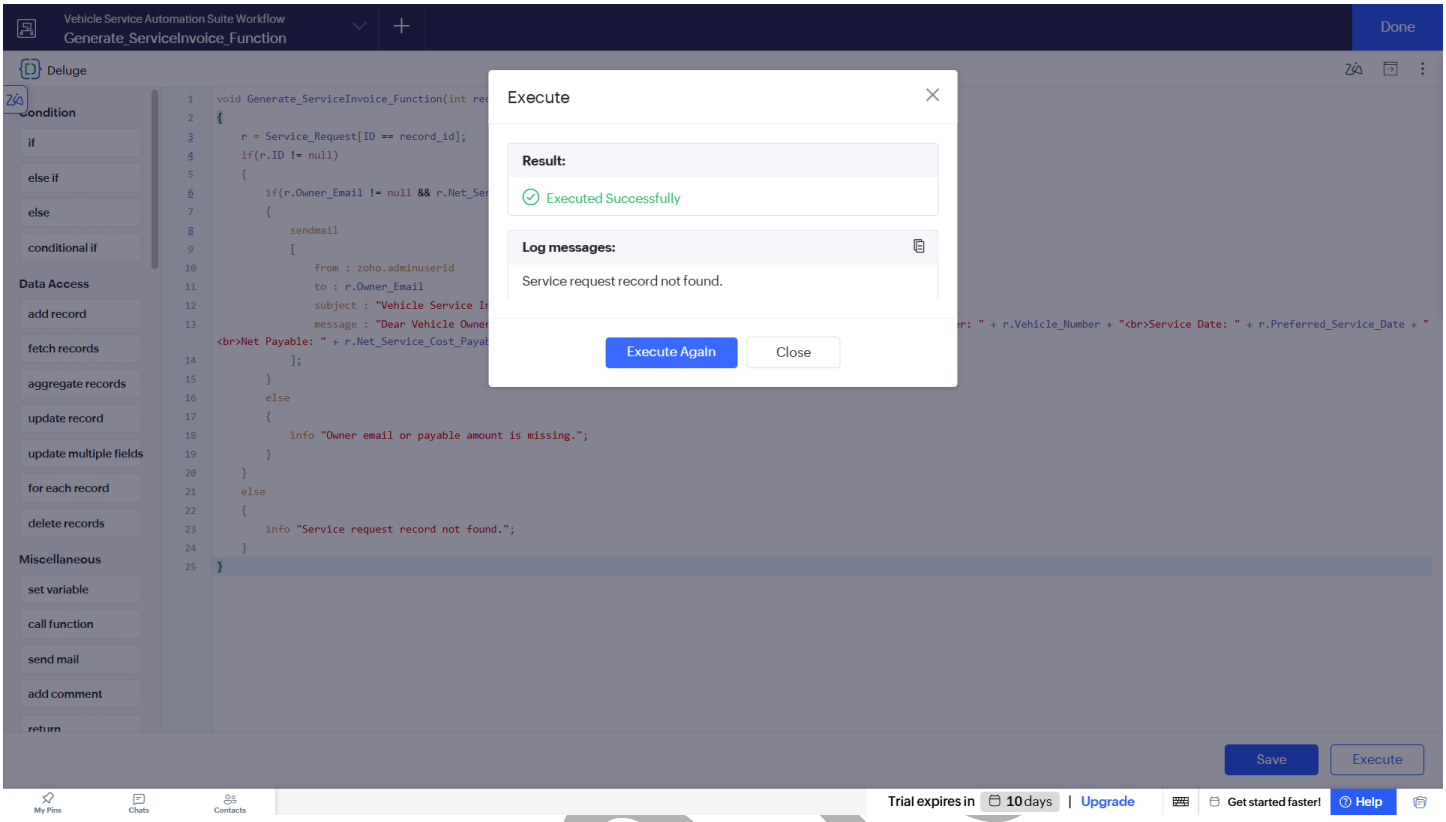

2407

8. Live Workflow Execution & Testing:

Trigger the end-to-end automation from the live application. Submit a test service request to receive the automated confirmation email, transition the record through the Blueprint stages, and execute the payment to observe the automated invoice generation.
