NAME: S VISHAL
ROLL NO: 240701600

EXPERIMENT – 06

Deluge Scripting Basics - Learning Simulator

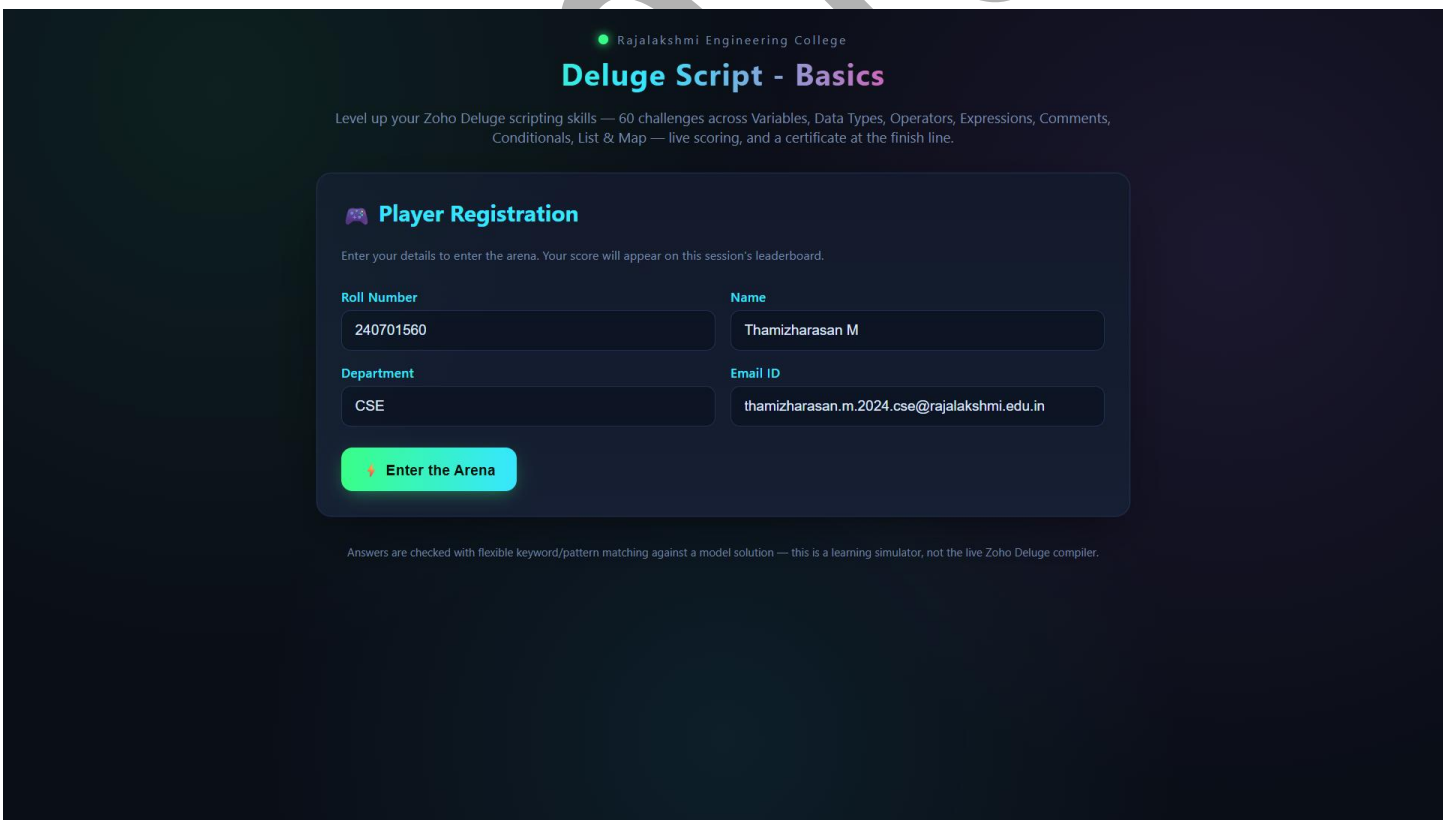

Aim:

To master the fundamentals of the Zoho Deluge scripting language by successfully completing a series of interactive programming challenges covering variables, data types, operators, expressions, conditional statements, lists, and maps using the learning simulator platform.

Procedure:

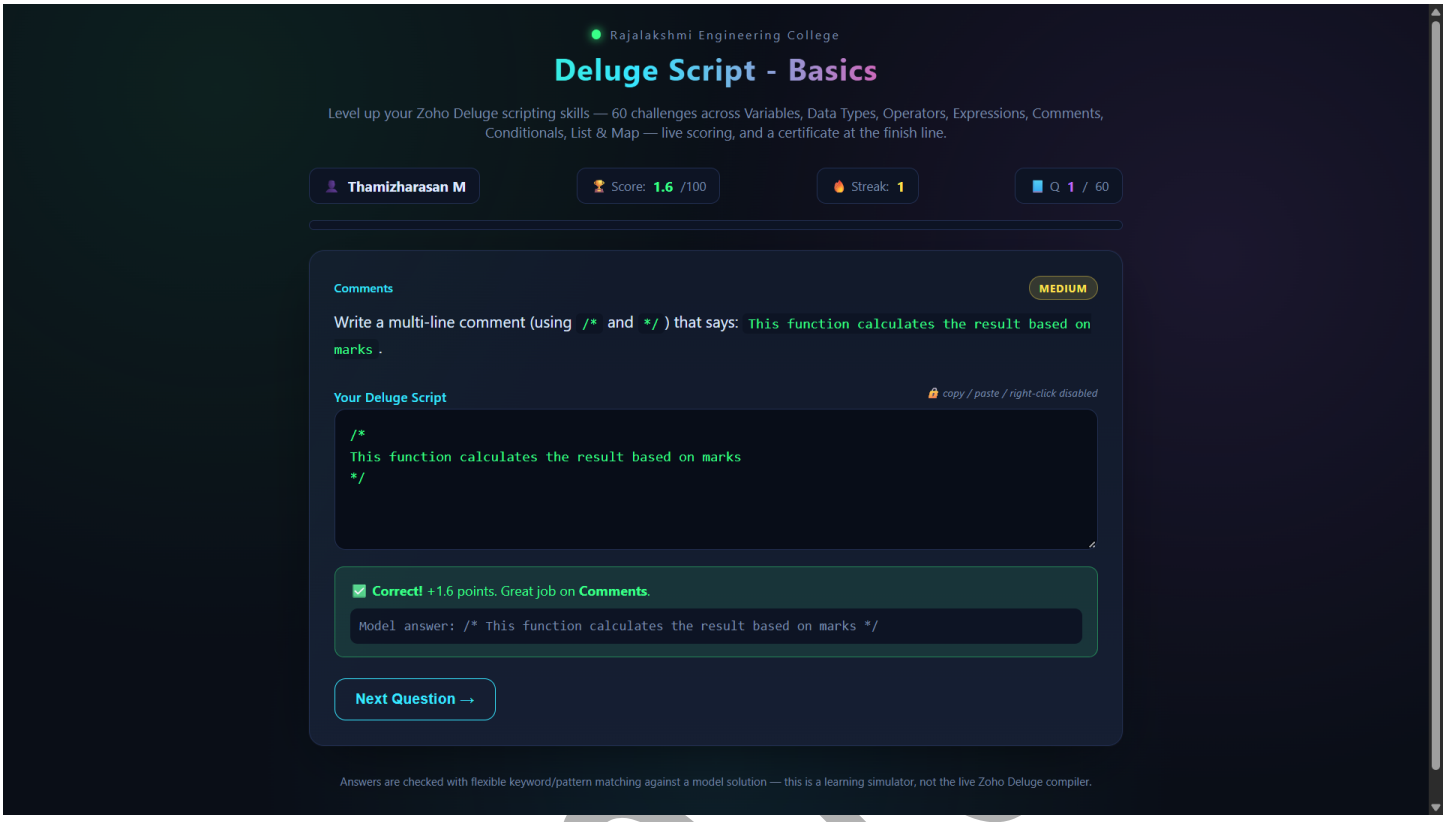

1. 1. Simulator Registration:

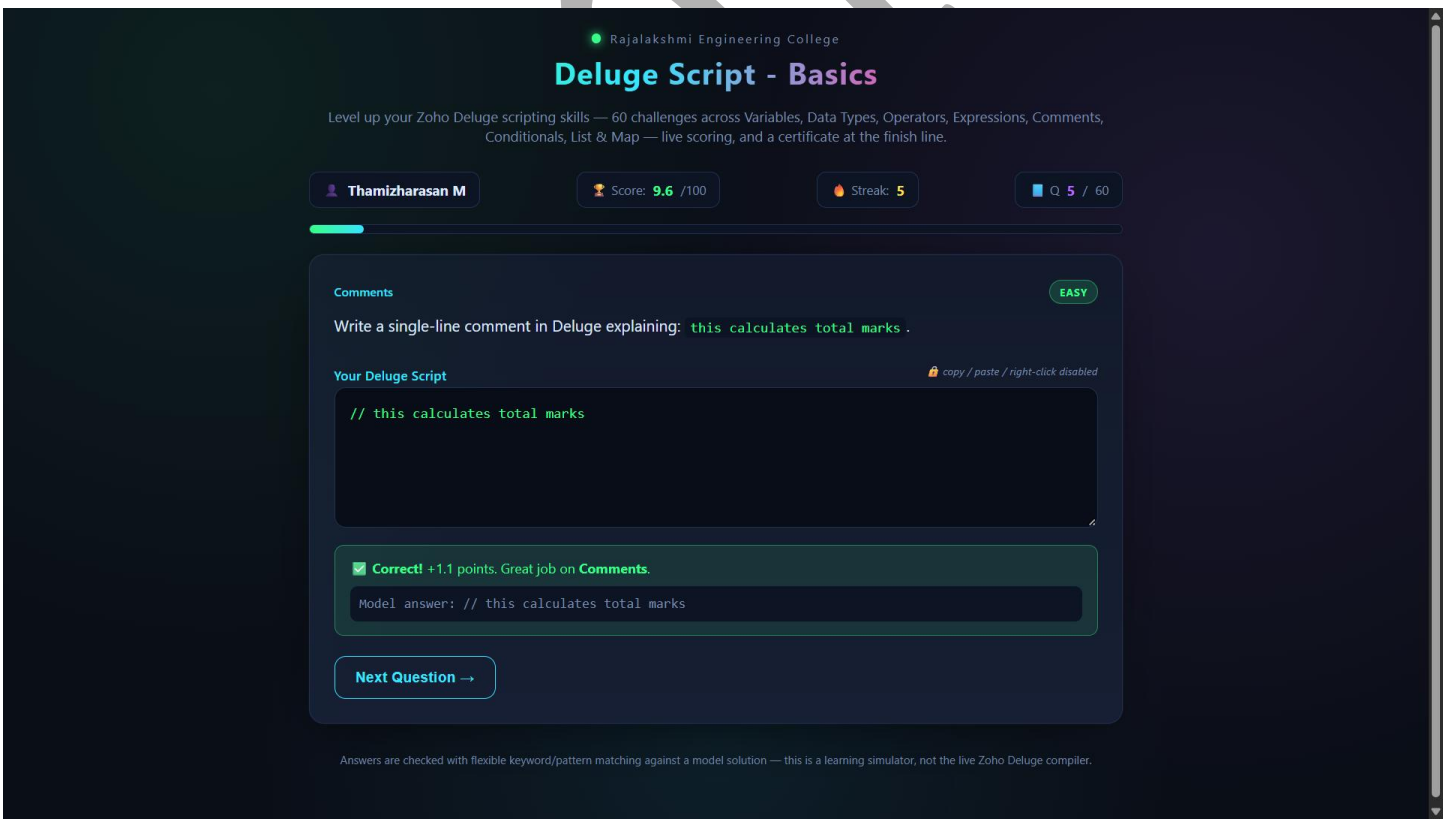

Enter the Deluge Script learning arena by registering with the designated Roll Number (240701600), Name (S Vishal), Department (CSE), and Email ID.

2. 2. Scripting Fundamentals - Comments:

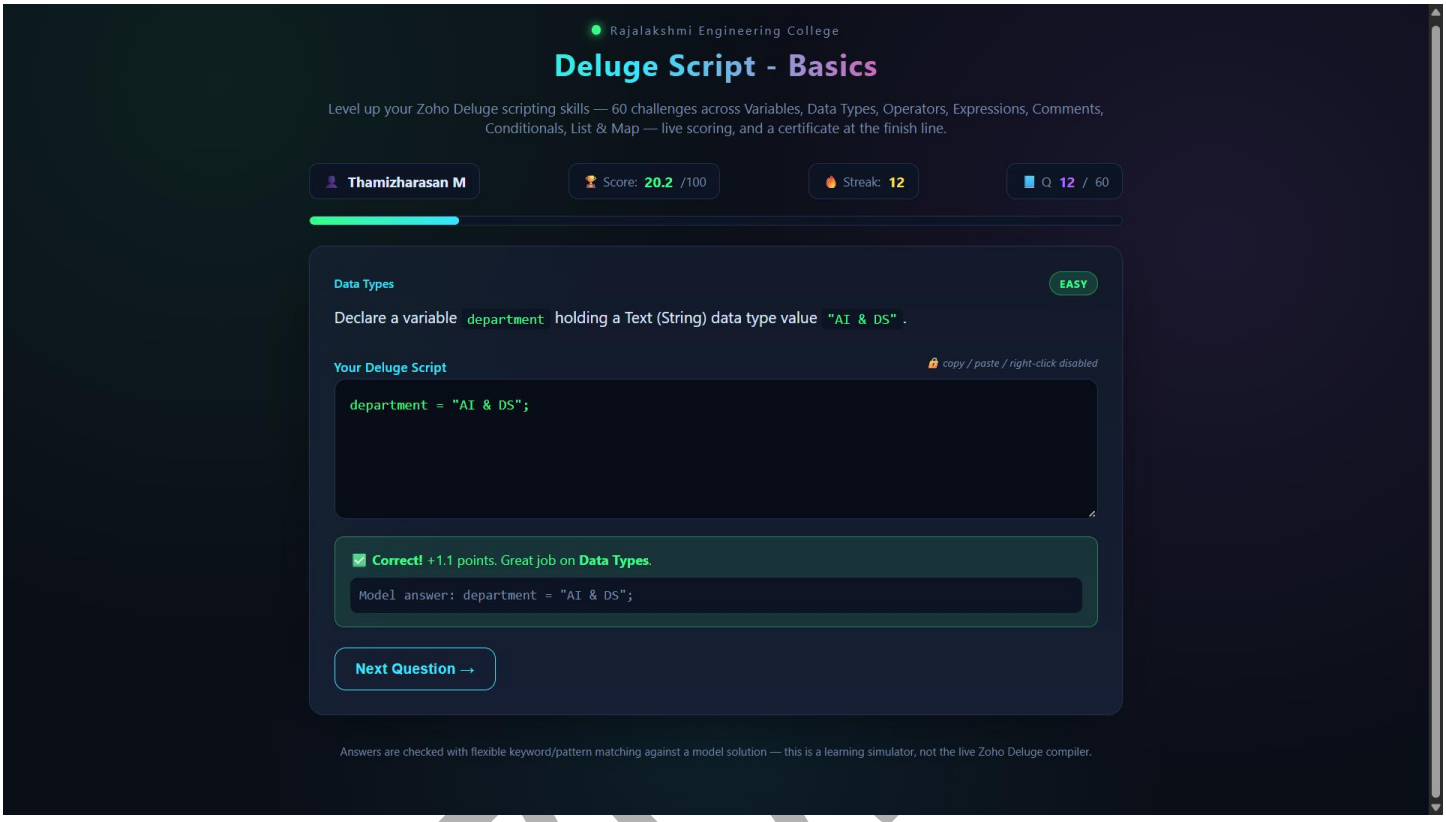

Implement both single-line (`//`) and multi-line (`/* */`) comments in Deluge syntax to annotate code effectively.

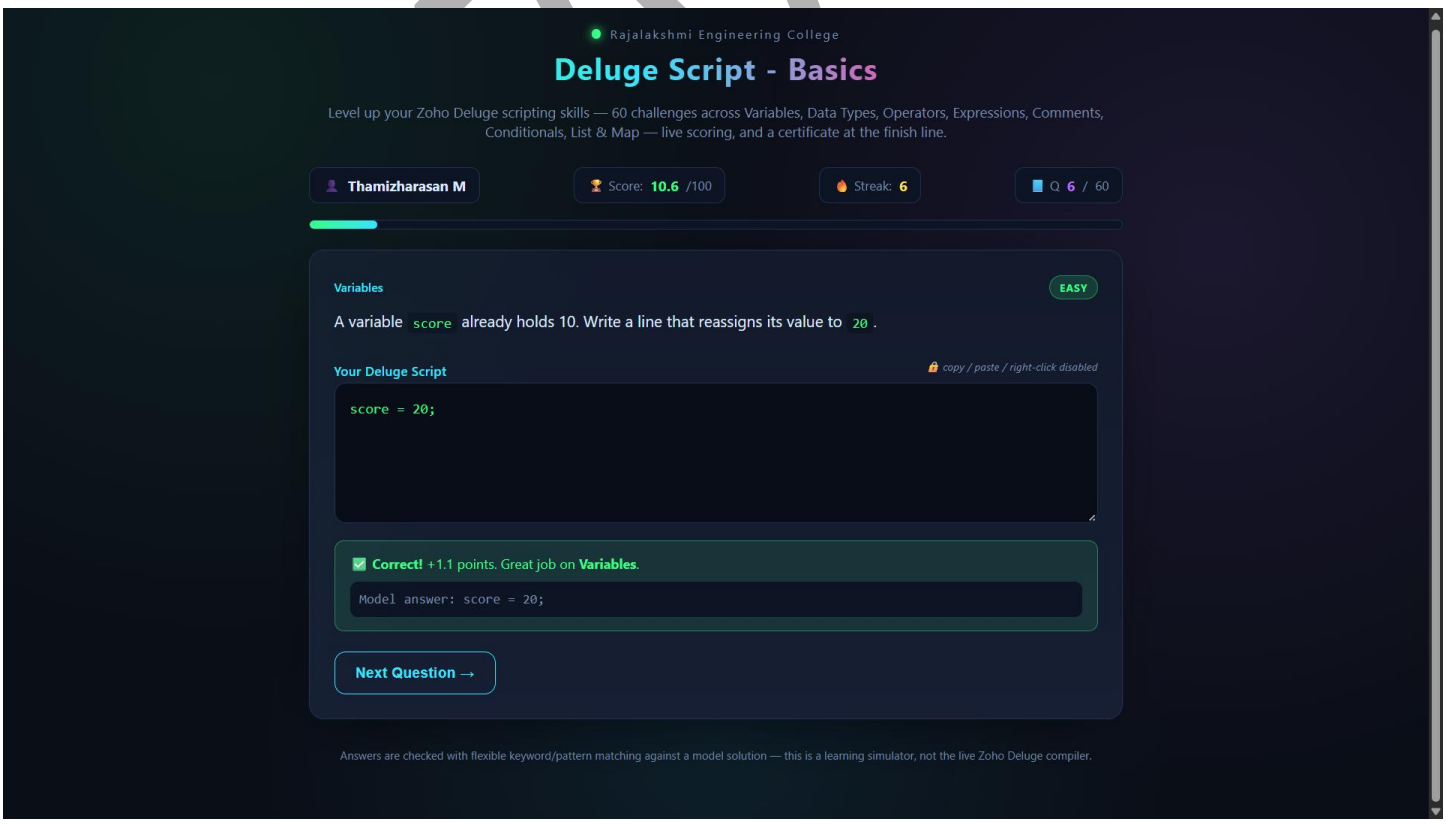

3. 3. Variables and Data Types:

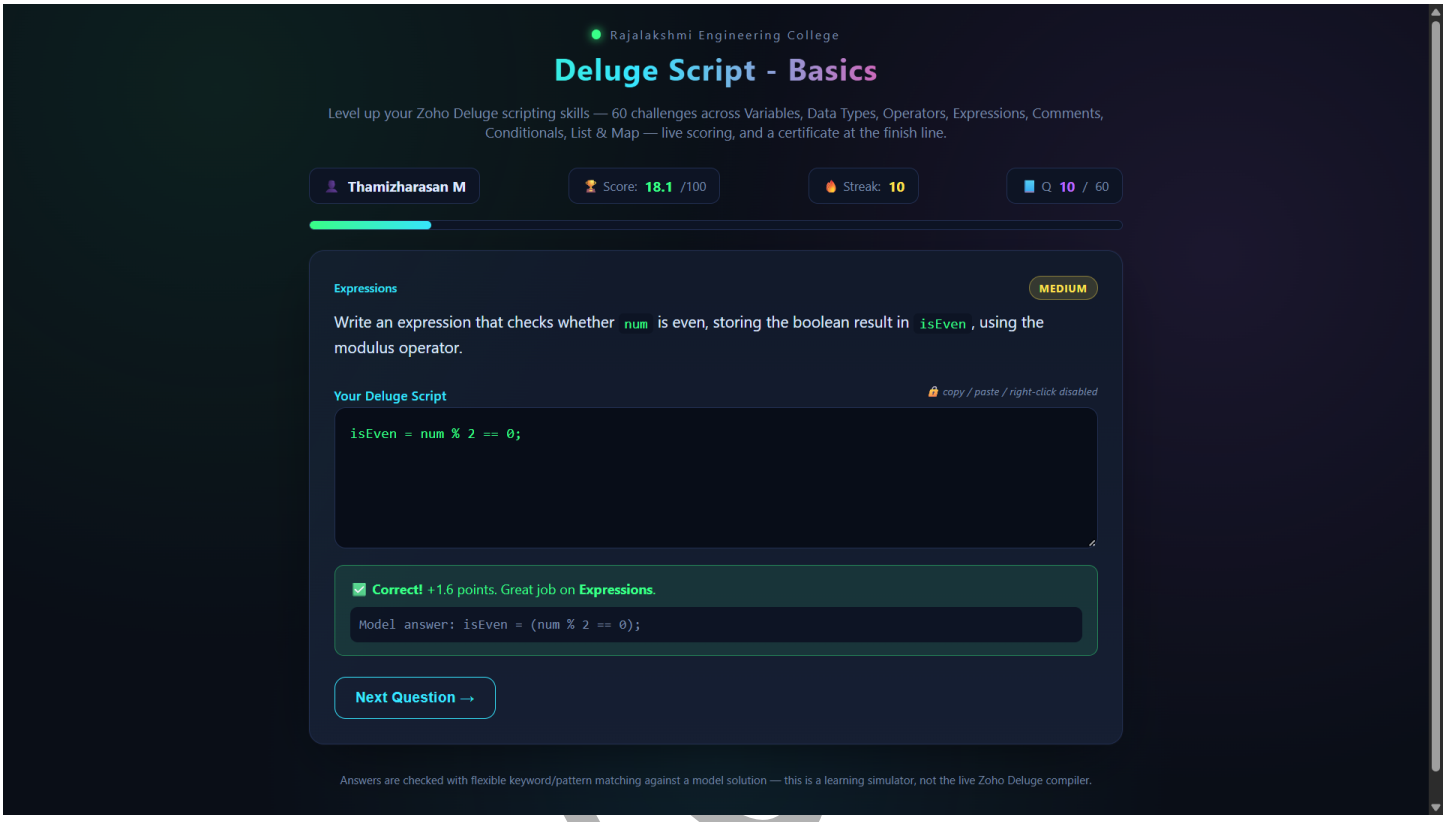

Declare variables holding String data types (e.g., `department = "AI & DS";`) and perform variable reassignment (e.g., updating a `score` variable to 20).

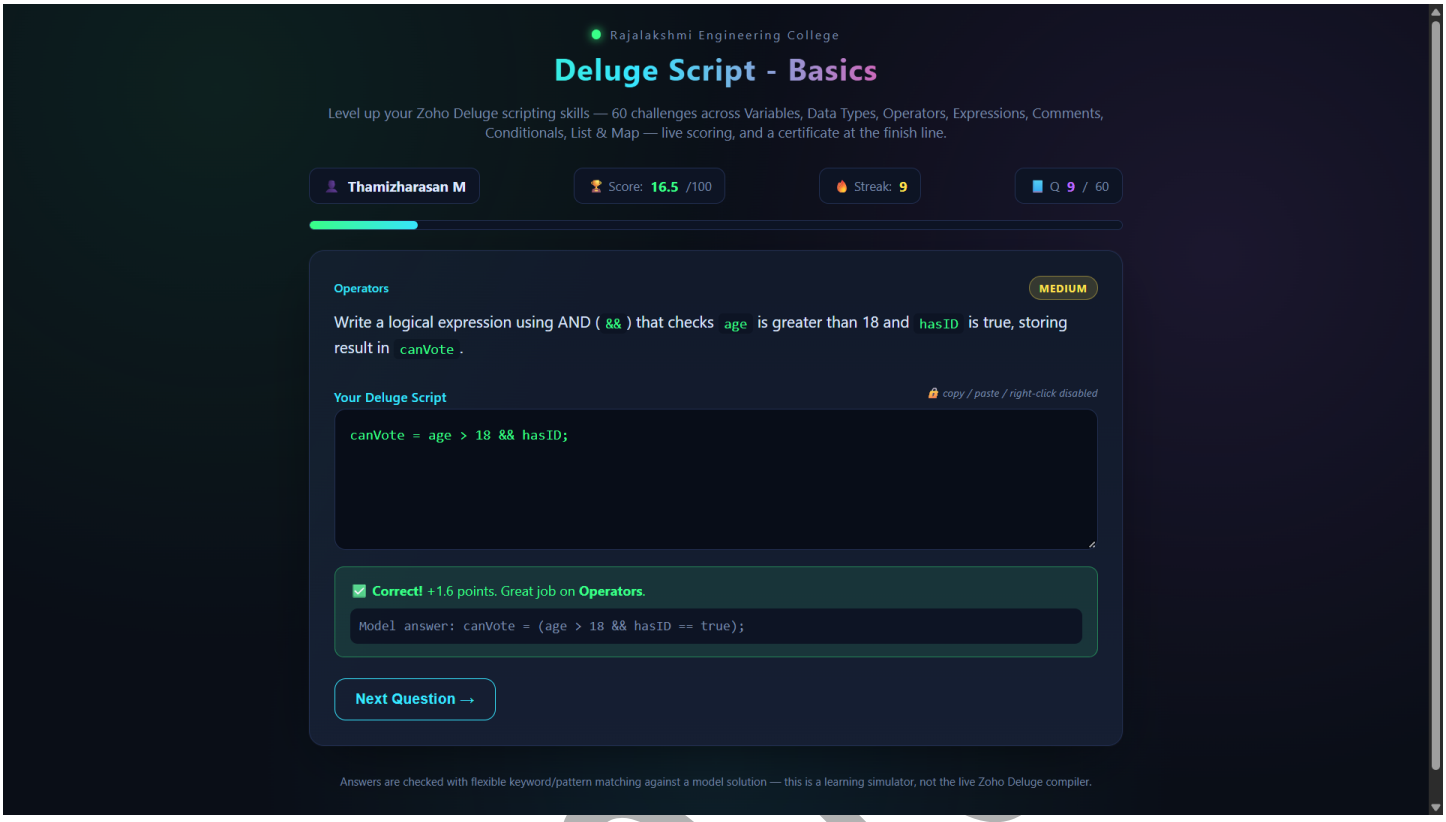

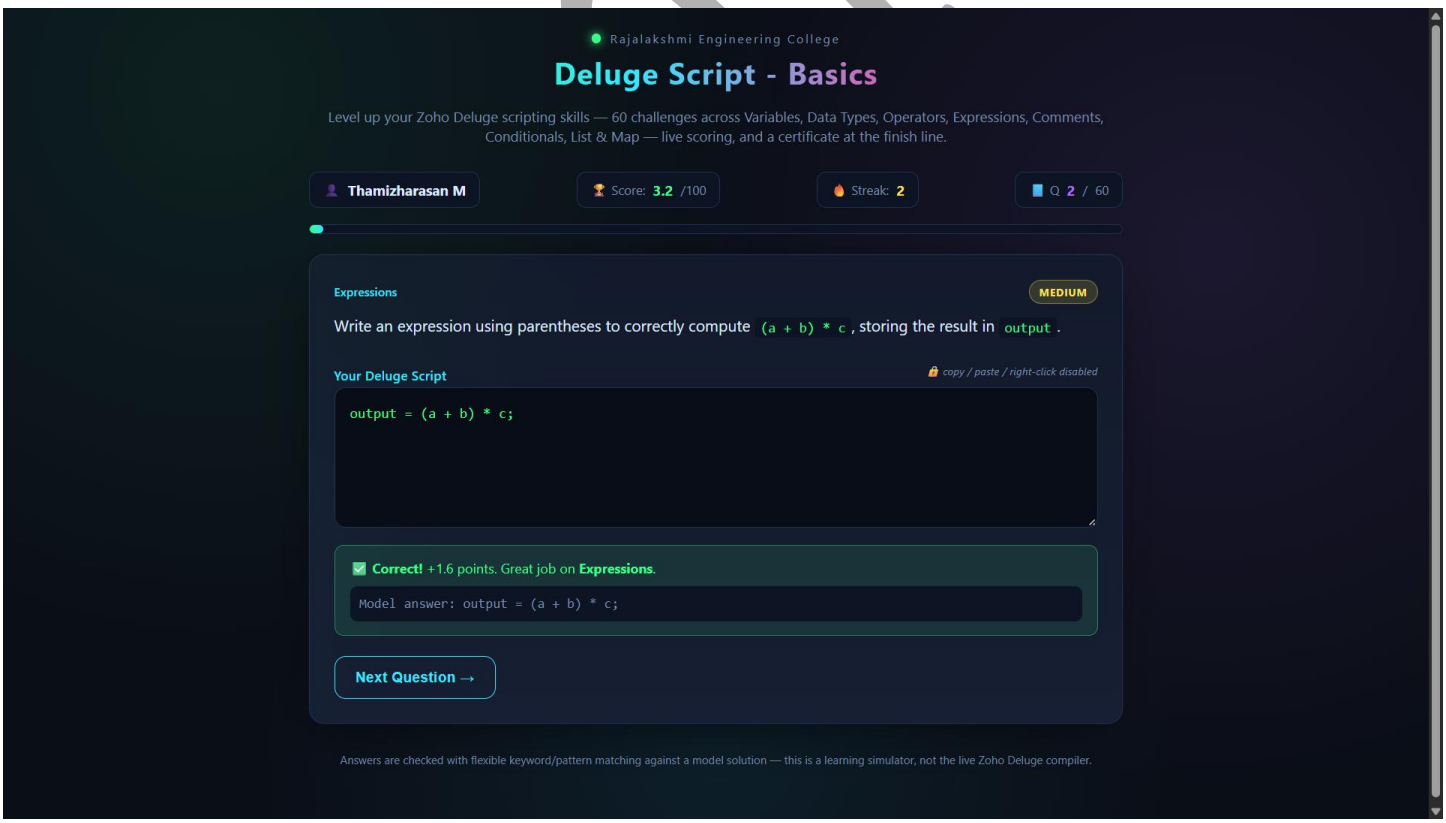

4. 4. Operators and Expressions:

Construct mathematical expressions using operators (e.g., modulus for checking even numbers) and logical expressions using AND (`&&`) operators to evaluate multiple conditions.

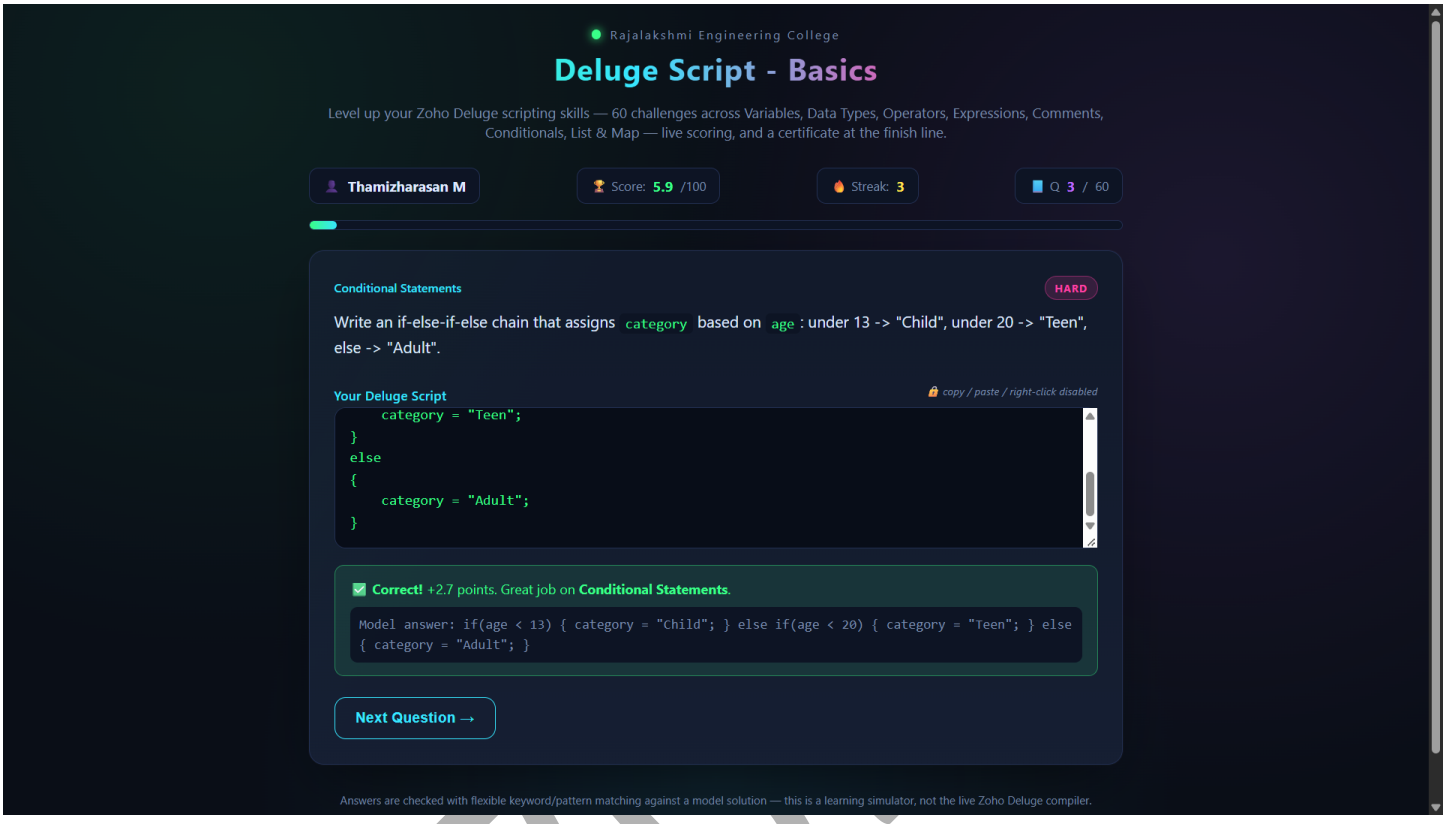

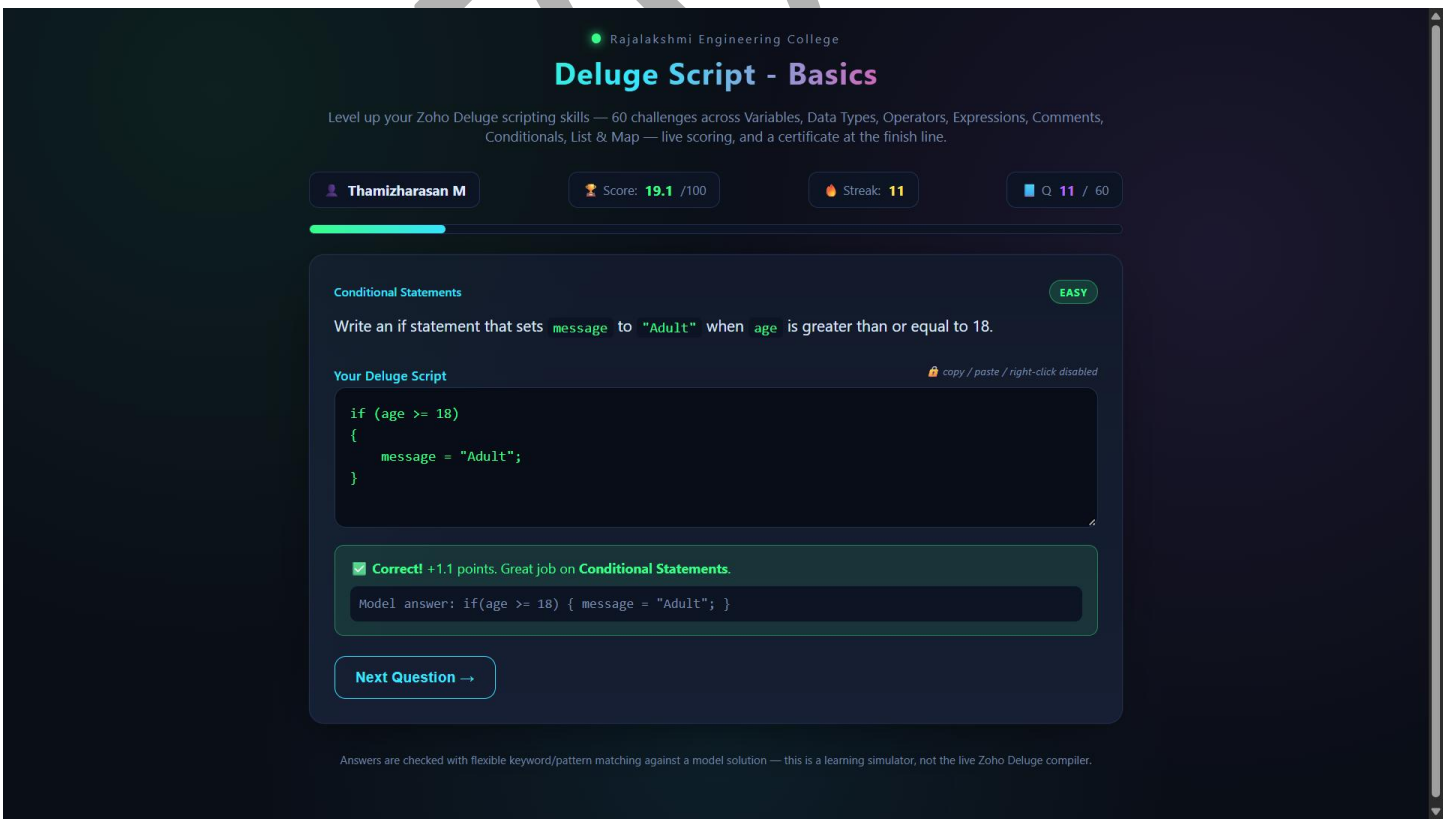

5. 5. Conditional Logic:

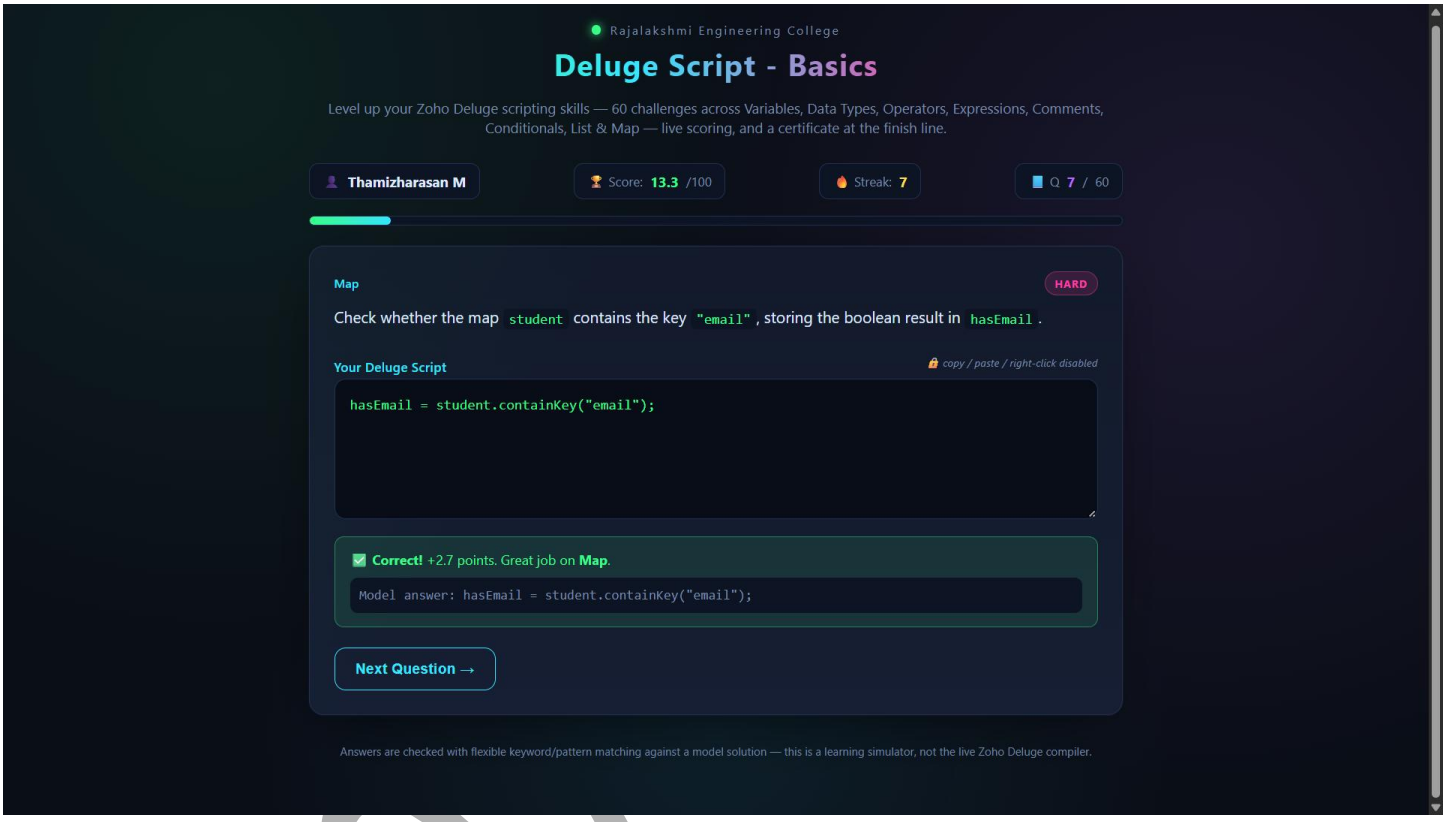

Write conditional flow control statements, including simple `if` blocks and complex `if-else-if-else` chains to categorize data based on specific age criteria.

6. 6. Data Collections - Lists & Maps:

Initialize and manipulate collection data types. Create Lists and use the `.add()` function to append values. Interact with Maps by using `.containKey()` to check for the existence of a key and `.get()` to retrieve specific values.

Rajalakshmi Engineering College

Deluge Script - Basics

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.

Thamizharasan M | Score: 14.9 /100 | Streak: 8 | Q 8 / 60

Map — MEDIUM

Retrieve the value for key `"name"` from the map `student` and store it in `studentName`.

Your Deluge Script — copy / paste / right-click disabled

```
studentName = student.get("name");
```

Correct! +1.6 points. Great job on **Map**.

Model answer: `studentName = student.get("name");`

Next Question →

Answers are checked with flexible keyword/pattern matching against a model solution — this is a learning simulator, not the live Zoho Deluge compiler.

Deluge Script - Basics

Level up your Zoho Deluge scripting skills — 60 challenges across Variables, Data Types, Operators, Expressions, Comments, Conditionals, List & Map — live scoring, and a certificate at the finish line.

Thamizharasan M | Score: 8.5 /100 | Streak: 4 | Q 4 / 60

List — HARD

Create an empty List named `rollNumbers` and then add the values 101 and 102 to it.

Your Deluge Script — copy / paste / right-click disabled

```
rollNumbers = List();
rollNumbers.add(101);
rollNumbers.add(102);
```

Correct! +2.7 points. Great job on **List**.

Model answer: `rollNumbers = list(); rollNumbers.add(101); rollNumbers.add(102);`

Next Question →

Answers are checked with flexible keyword/pattern matching against a model solution — this is a learning simulator, not the live Zoho Deluge compiler.

Result:

The foundational concepts of the Zoho Deluge scripting language were successfully learned and applied. Through the interactive simulator, all scripting challenges—spanning variables, operators, conditional structures, and data collections—were solved accurately, demonstrating a practical understanding of low-code backend scripting principles.
