EXPERIMENT – 07

User, Role and Permission Management in Zoho Creator

Application: Vehicle Service Management System with Role-Based User Permissions using Zoho Creator.

AIM:

To create a Vehicle Service Management System in Zoho Creator and demonstrate role-based user permissions by creating distinct user roles (Admin, Service Manager, Mechanic, and Receptionist) and assigning specific view, add, edit, and delete access levels.

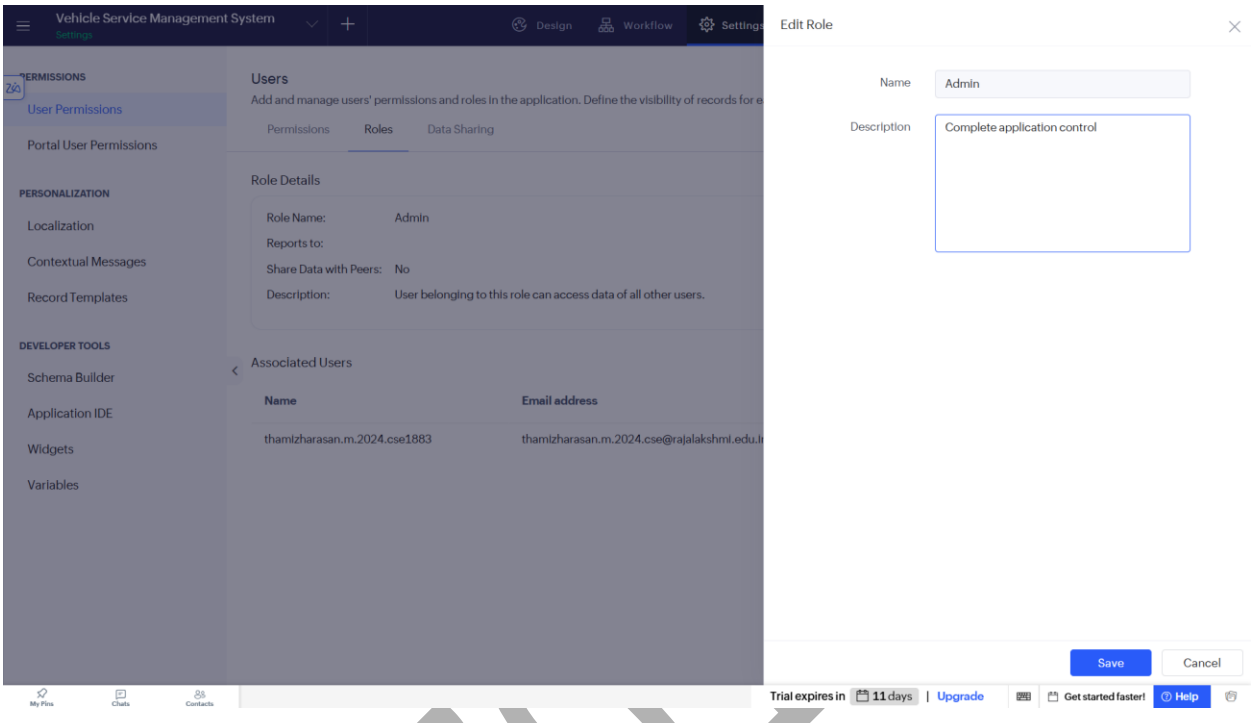

PROCEDURE:

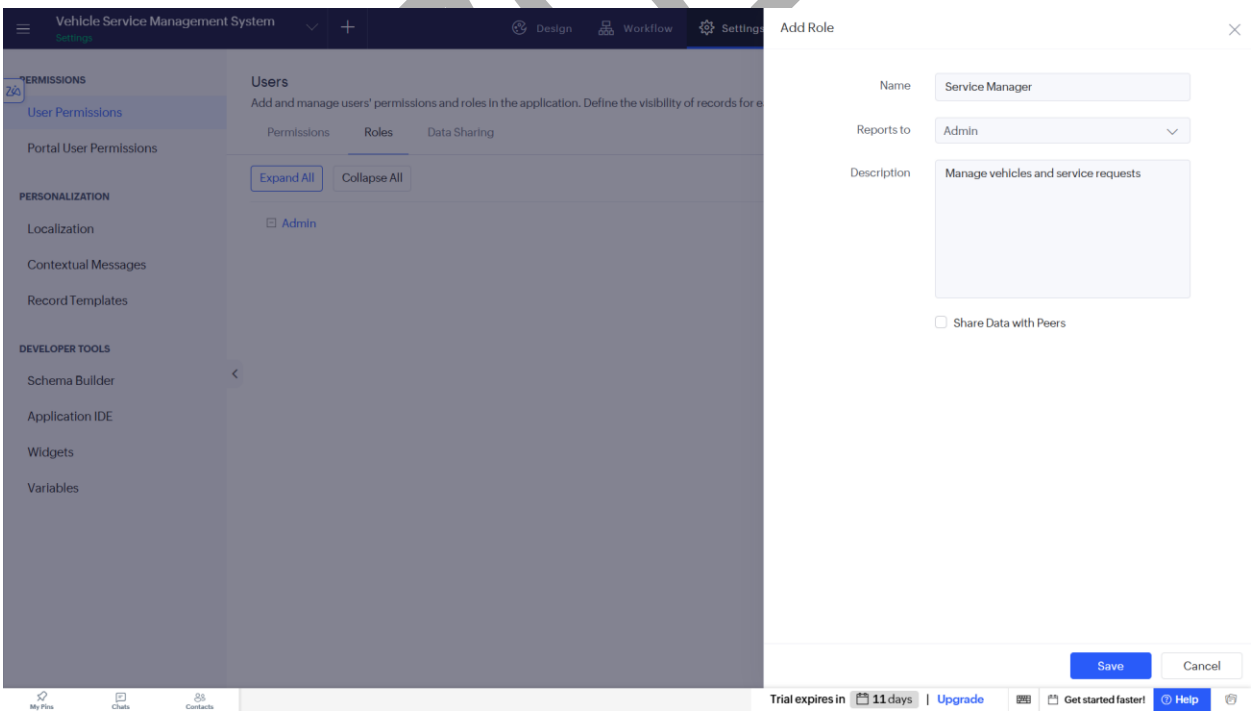

1. Create a new application named 'Vehicle Service Management System' with 'Vehicles' and 'Service Requests' forms.
2. Navigate to Settings -> Users and Permissions -> Roles to define the organizational hierarchy.
3. Create the roles: Admin (Top level), Service Manager (Reports to Admin), Receptionist (Reports to Admin), and Mechanic (Reports to Service Manager).
4. Navigate to the Permissions tab to define custom access profiles for each role.
5. Configure 'Admin Profile' with full Access, View, Edit, and Delete permissions.
6. Configure 'Service Manager Profile' with Access, View, and Edit permissions for Vehicles and Service Requests, while restricting Delete access.
7. Configure 'Receptionist Profile' with Access, View, and Edit permissions for Vehicles, and Access/View permissions for Service Requests.
8. Configure 'Mechanic Profile' with View access to Vehicles, and View/Edit access to Service Requests.
9. Navigate to the Users tab, add four sample users, and assign them their respective roles and permission profiles.
10. Log in as each user to verify that the access controls (View/Add/Edit/Delete) are working as expected.

3. Application Dashboard & Service Requests

CONCLUSION:

The Vehicle Service Management System was successfully created in Zoho Creator. The role-based access control was effectively demonstrated by assigning different module permissions to the Admin, Service Manager, Mechanic, and Receptionist roles, thereby ensuring appropriate data security and workflow management.
