EXPERIMENT -11
Approval Process

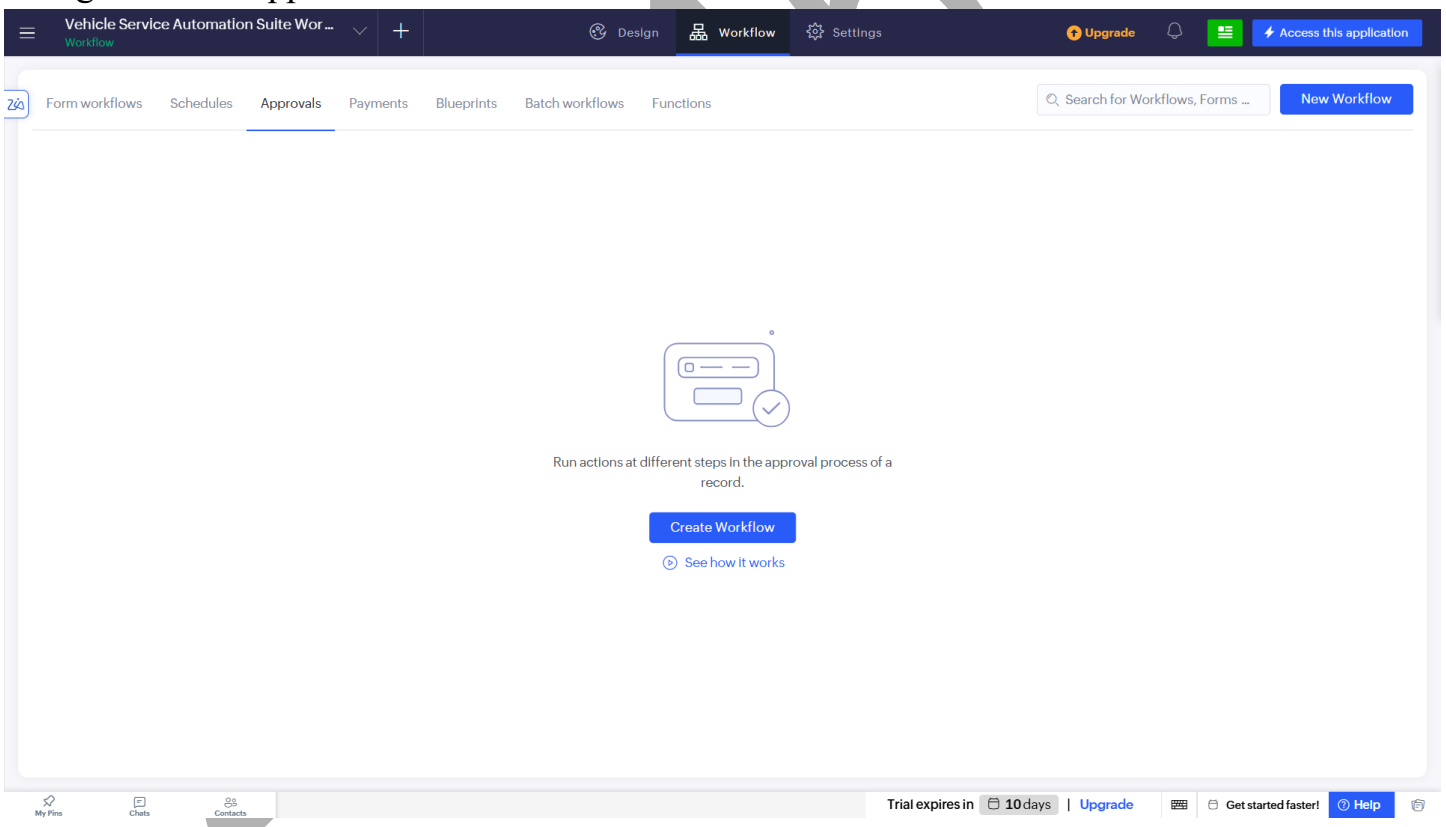

Application Name: **Vehicle Service Management System**

Aim

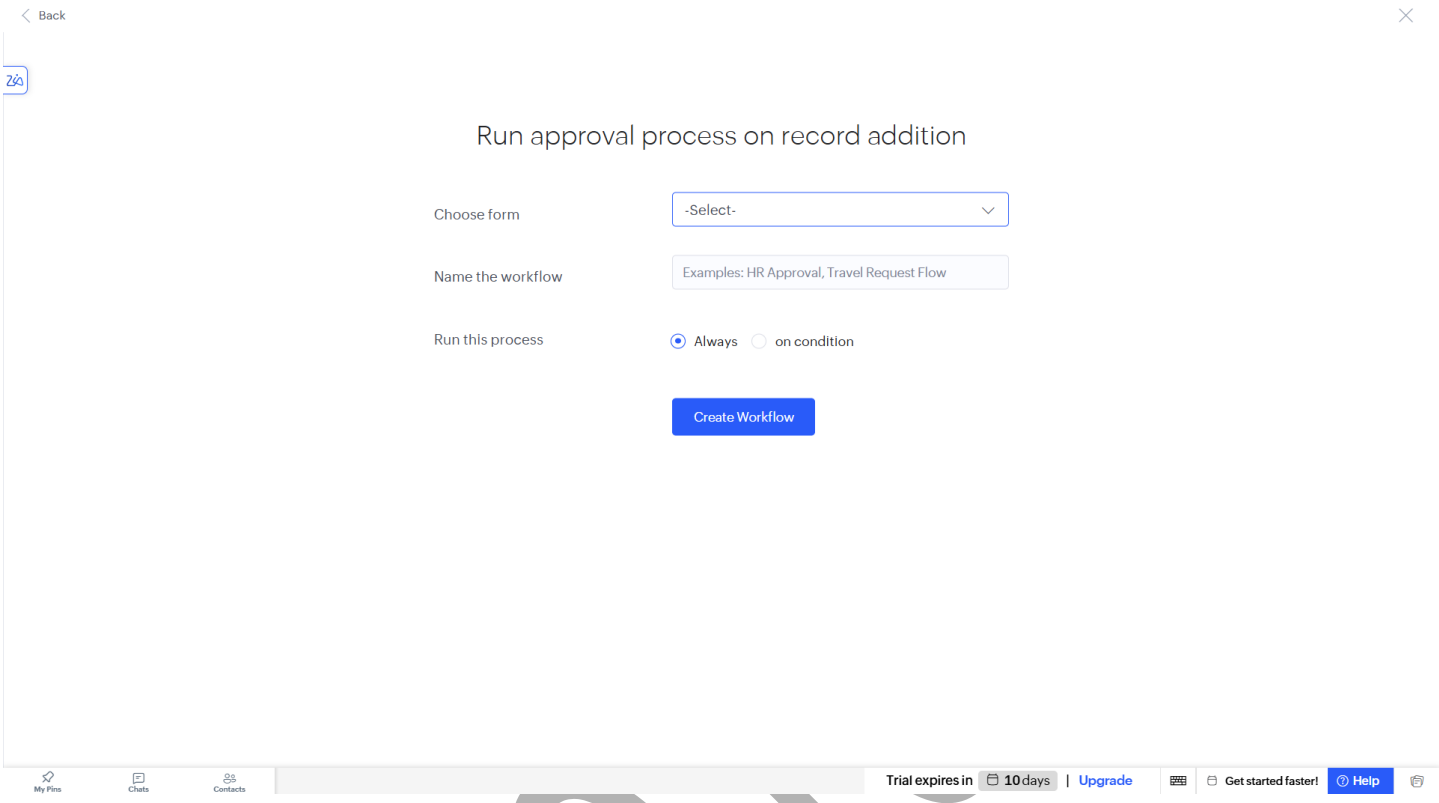

To design and configure an approval workflow process for high-cost service requests in the Vehicle Service Management System.

Procedure

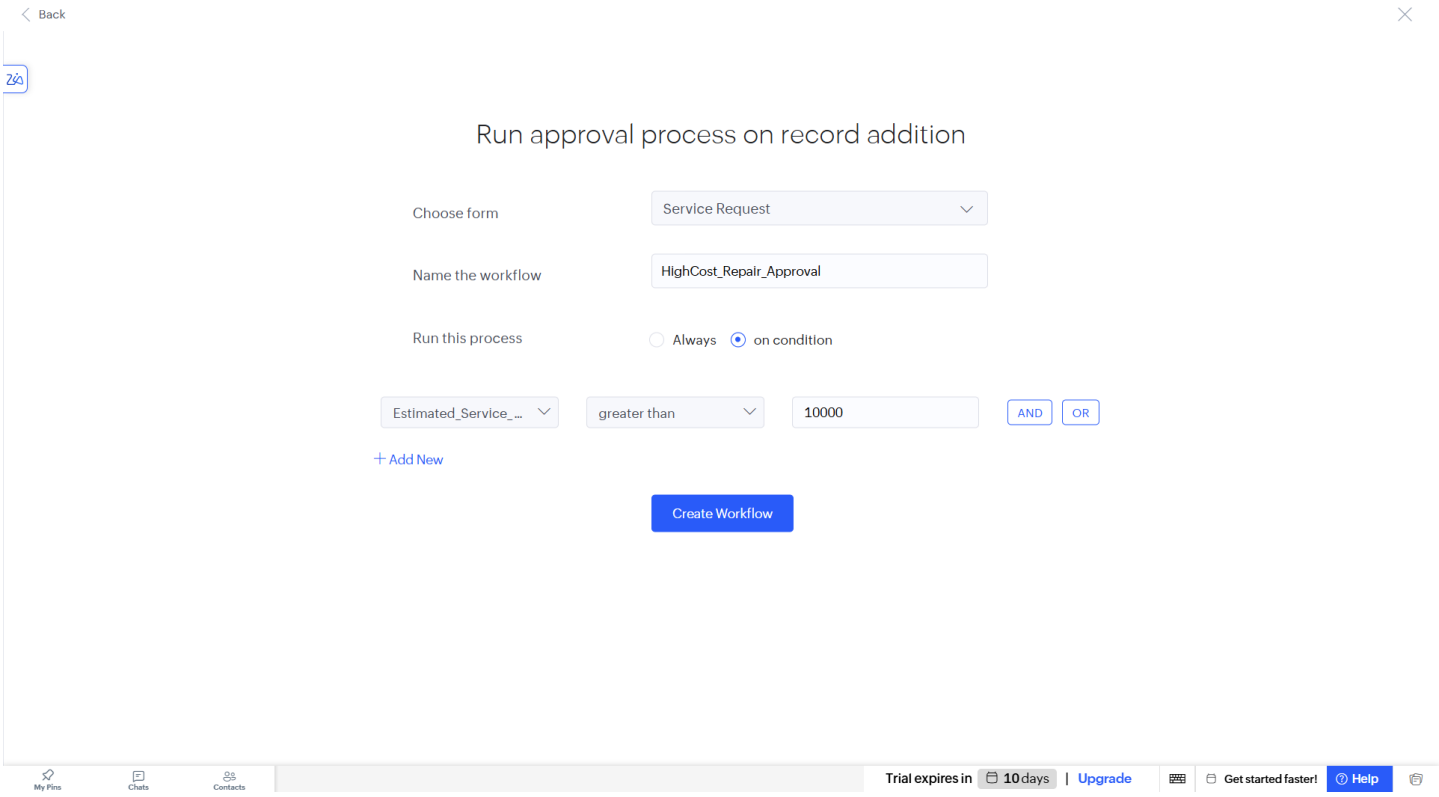

1. Navigate to the Approvals tab under Workflow and click on "Create Workflow".

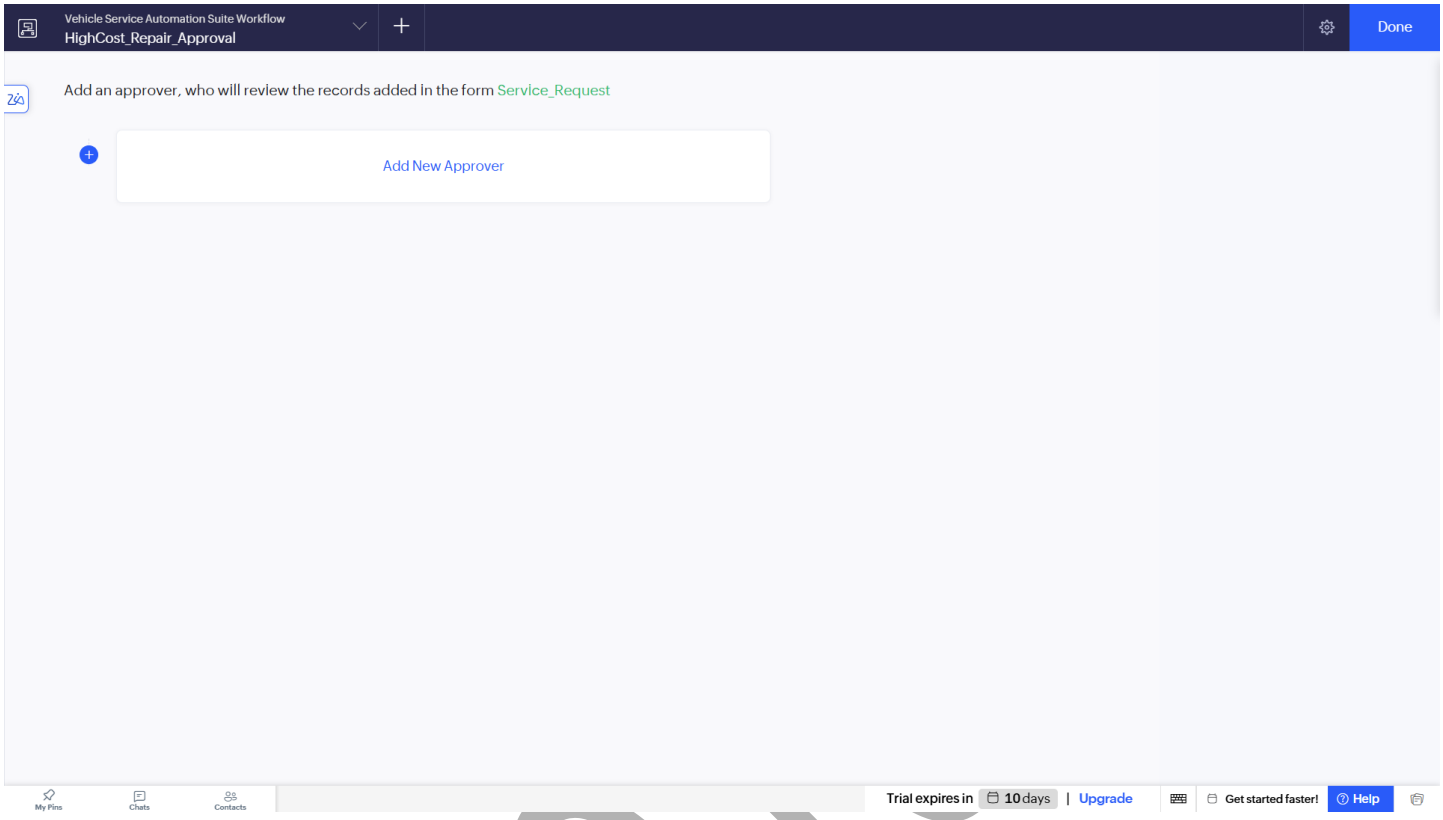

2. Set up the approval process to run on record addition for the "Service Request" form and name it HighCost_Repair_Approval.

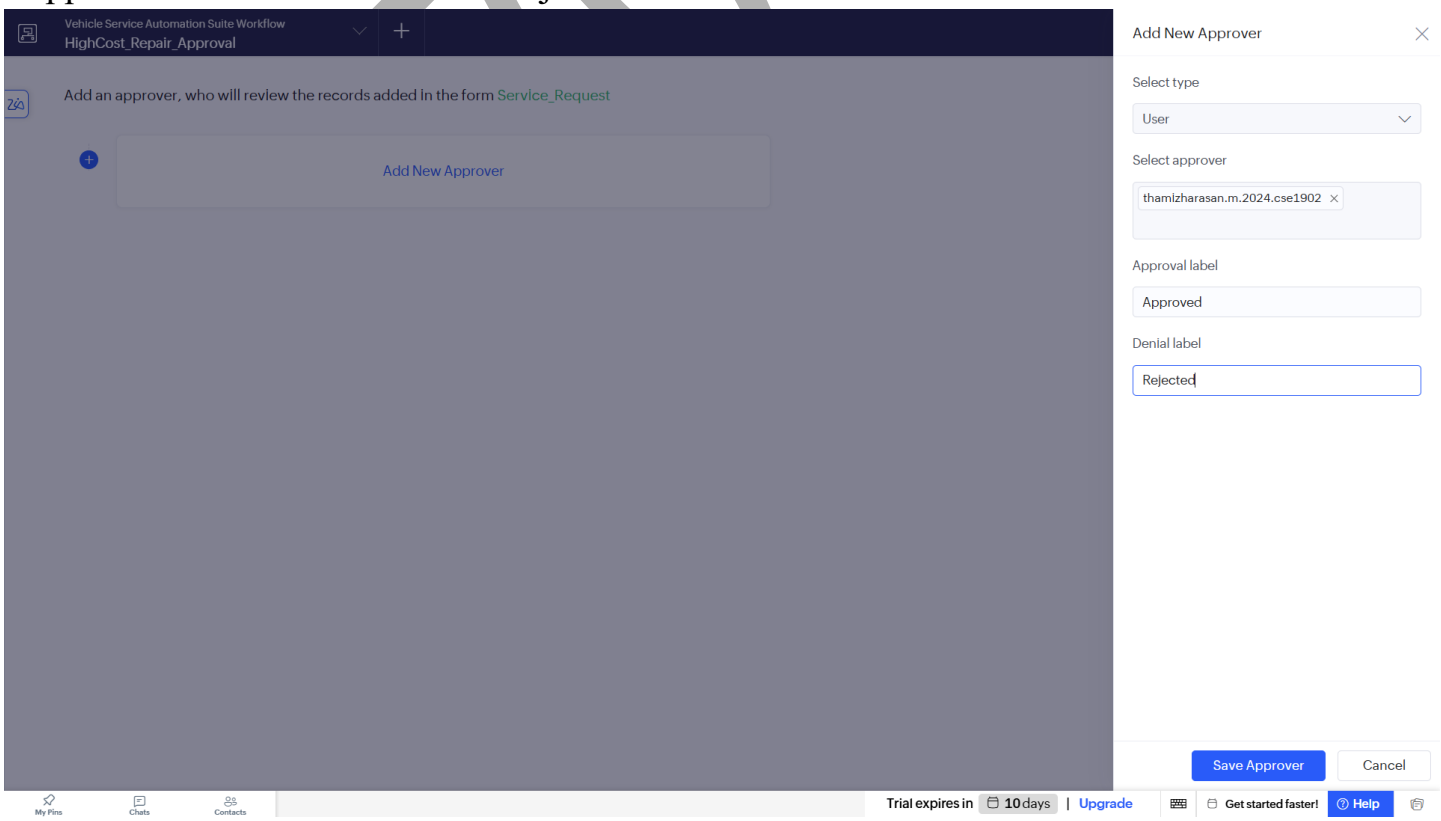

3. Define the condition for the approval process to trigger only when the Estimated_Service_Cost is greater than 10000.

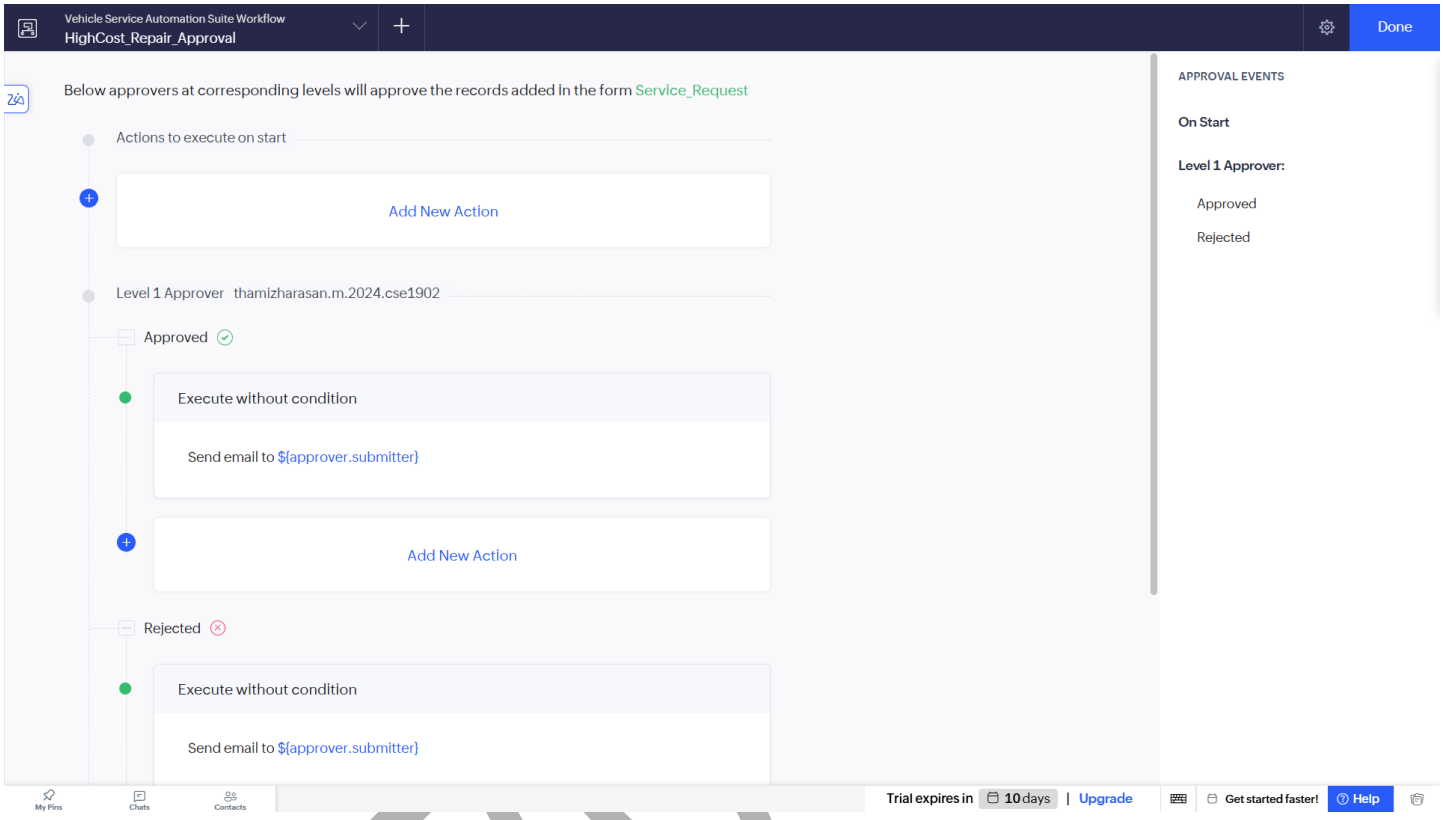

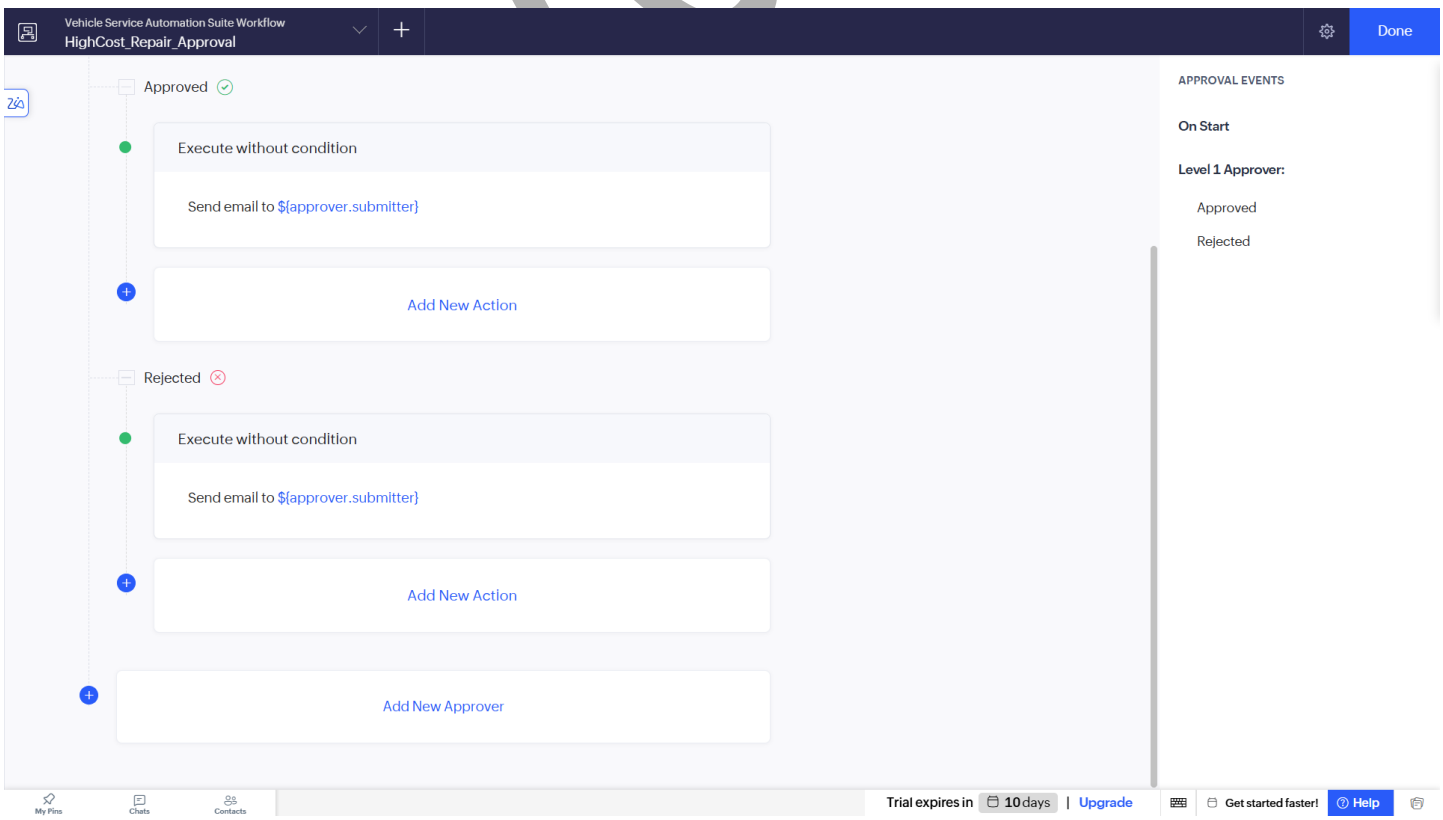

4. Add a new approver by selecting a specific user and setting the Approval label to "Approved" and Denial label to "Rejected".

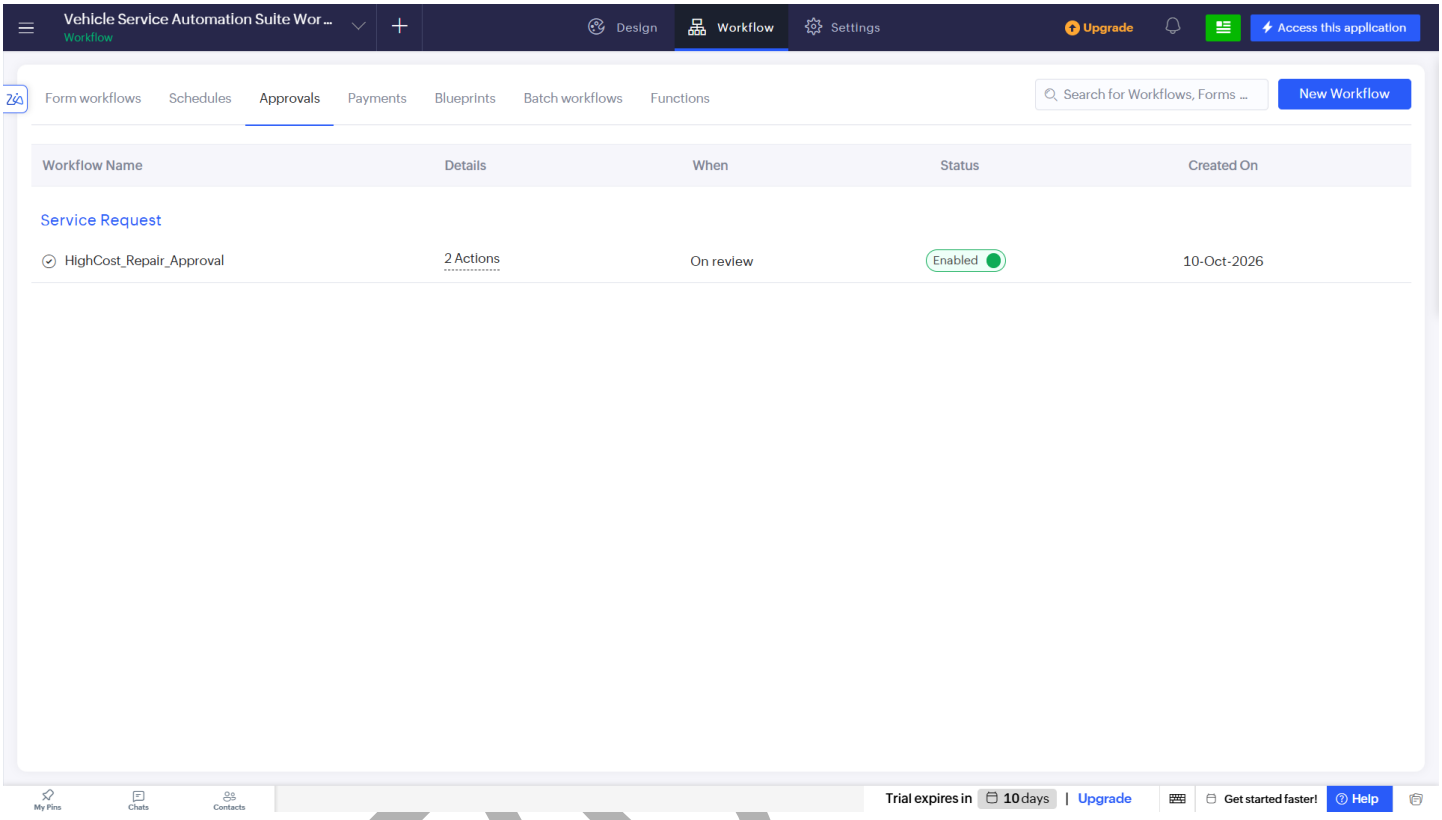

5. Configure automated email notification actions to be sent to the submitter upon both "Approved" and "Rejected" outcomes.

6. Save the configuration and verify that the approval workflow is active and listed as "Enabled" in the Approvals dashboard.

Result

The conditional approval workflow for high-cost repairs was successfully created, configured with designated approvers and email notifications, and enabled within the Vehicle Service Management System.
